

D660-ET MiniPurge[®] Manual ML601

Important Note:

It is essential for safety that the installer and user of the Expo system follow these instructions.

Please refer to the standard for principles and definition.

These instructions apply only to the pressurizing system. it is the responsibility of the manufacturer of the pressurized enclosure to provide instructions for the enclosure.

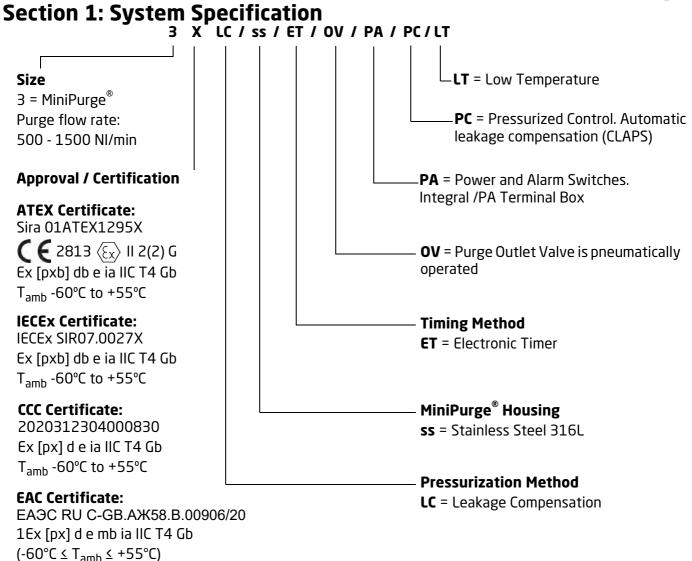

Expo Technologies reserves the right to replace any component, with one of the equivalent functionality.

Conditions of Safe Operation

The D660 design permits system operation in external ambient temperatures down to -60°C. Installation & safe use requires the internal heater to be connected to maintain both the internal ambient temperature and the temperature of the logic air supply above -20°C. Temperature sensors are provided for user connection, and it is the users responsibility to not initiate purge unless these temperature conditions are met.

Temperature sensors (PT100 RTDs) are provided for user monitoring of internal ambient temperature and logic air supply temperature. The individual sensors are each 4-wire devices with all 4 wires brought to terminals in the system junction box. The RTDs are to be treated as 'simple apparatus' intrinsically safe components - see EXPO 20MD0C1403X as attached. Users may decide to connect RTD monitoring circuits as 2-, 3- or 4-wire circuits as preferred. The temperature monitoring circuits themselves are provided by others.

If the logic air supply temperature falls below -10°C, this should be investigated and rectified. If the logic air supply falls below -20°C, the purge system will be operating outside of its certification parameters and should be stopped. The purge system can only be re-initiated when the logic air supply is above -20°C.

If the internal ambient temperature falls below -20°C, this should be investigated and rectified.

MiniPurge[®] Control Unit Data

Action on Pressure Failure:	Alarm and Trip (isolate power to pressurized enclosure), user adjustable Alarm Only.
Type of Operation:	Automatic leakage compensation using the Closed Loop Automatic Pressurization System (CLAPS System).
Leakage Compensation Capacity	2000 NI/min maximum.
Enclosure Material:	Stainless Steel 316L.
Mounting Method:	Wall mounting straps. Fixing holes as per drawing.
Temperature Limits:	Ambient temperature -60°C to +55°C
	Purge media temperature -40°C to +55°C
Compressed Air Supply:	Clean, dry, oil free air or inert gas. Refer to Air Supply Quality section in Installation of the System.
Supply Pressure:	4 to 8 barg (58 to 116 psi).
Main Regulator:	Set at 5 barg, 40 µm automatic drain supply inlet filter.
Logic Regulator and Gauge:	Fitted and set to 2.5 barg (36 psi).
Process Connections:	Purge supply and outlet to pressurized enclosure 1 / $_{2}$ " NPT female.
	Minimum supply line 25 mm (1") ID tube, inlet sized appropriately for flow rate.
	Reference points & signals ${}^{1}/{8}^{''}$ NPT female, minimum 6 mm pipe to be used.
Visual Indicators:	Alarm (Red🛑) / Pressurized (Green🔵).
	System Purging: 4 LEDs that flash sequentially to indicate elapsed time (black when not purging).
/PA Terminal Box:	GRP, Ex e IIC T6 Gb / Ex tb IIIC T85°C Db IP66 T _{amb} : -60°C to 75°C. Mounted inside D660 system c/w terminals, front access cover & access for glands on bottom of D660 system.
Power Interlock Switch:	DPNO switch, contact ratings 250 Vac 4 Amps (AC-15) / 24V DC 4A, Ex d IIC T6 Gb / Ex tb IIIC T80°C Db.
Alarm Switch:	SPCO switch, contact ratings 250 Vac 4 Amps (AC-15) / 24V DC 4A, Ex d IIC T6 Gb / Ex tb IIIC T80°C Db.
Intermediate Switch:	SPCO switch, contact ratings 250 Vac 4 Amps (AC-15) / 24V DC 4A, Ex d IIC T6 Gb / Ex tb IIIC T80°C Db.
Minimum Pressure Sensor:	Minimum: 0.5 mbarg.
	Maximum: 5.0 mbarg.
	Default Setting: 1.5 mbarg.
	Tolerance -0, +0.7 mbarg.
Intermediate Sensor:	Minimum: 2.0 mbarg.
	Maximum: 7 mbarg.
	Default Setting: 4.0 mbarg.
	Tolerance: -0, +10%.
High Pressure:	Minimum: 20 mbarg.
	Maximum: 35 mbarg.
	Default Setting: 25 mbarg.
	Tolerance: -0, +10%.

Note: There must be a 1.5 mbarg difference between the minimum pressure and intermediate sensors and a 5 mbarg difference between the RLV lift-off point and the high pressure.

ween the RCV int-on point and the high pressure.		
Set at 6.4 mbarg (Tolerance: -0, +10%).

Section 2: Quick User Guide

Installation

The MiniPurge[®] system must be installed by a competent engineer, in accordance with relevant standards, such as IEC / EN 60079-14 and any local codes or practice.

- Mount the purge system in accordance with the hook-up drawing.
- Ensure the system is installed according to the full instructions in the "Installation of the System" section of this manual.
- All piping must be clean and free of dirt, condensation and debris prior to connection to the purge system or pressurized enclosure.
- It is strongly recommended that a local isolation valve is installed on the air supply upstream of the purge system.

Note: Most faults are due to restricted air supply, inadequate supply pipe work or drop in air supply pressure during the purge process.

Operation of the System

Once the system is installed correctly, turn on the air supply. Refer to Commissioning section.

Indicator	Colour	Status
Alarm / Pressurized	Red 🔴	Low pressure alarm (enclosure pressure too low)
Purging	Black 🛑	Purge flow too low or not in purge mode

The purge system commences the purge cycle:

- The purge air will enter the enclosure.
- The pressurized enclosure will obtain a positive pressure.
- The Purge Outlet Valve will open within the Relief Valve Unit.
- The air will then exit the Relief Valve Unit housing via the spark arrestor.

Indicator	Colour Status	
Alarm / Pressurized	Green 🔵	Pressurized (minimum enclosure pressure achieved)
Purging	Black	Purge flow too low

Open the Purge Flow Regulator Valve until the air flow reaches the required rate; the system will initiate the timed purge cycle. Start a stopwatch when the purging indicator flashes yellow.

Indicator	Colour	Status
Alarm / Pressurized	Green 🔵	Pressurized
Purging	Sequential flashing Yellow 🔶	Purge flow rate above minimum

On completion of an uninterrupted purge cycle of the required length, the system will indicate purge complete.

Stop the stopwatch when the purging indicator stops flashing.

Indicator	Colour	Status
Alarm / Pressurized	Green 🔵	Pressurized and in leakage compensation mode
Purging	Black	No longer in purge mode

Check stopwatch timing to verify that the actual purge time is equal to or greater than the required purge time.

Note: The recorded purge time must never be less than the required purge time.

The system is now operating correctly in leakage compensation mode.

If the system has not performed as expected, check the installation thoroughly and ensure it has been carried out according to the instructions.

If an obvious problem has not been highlighted and corrected, follow the procedures in the Fault Finding section.

If all checks have been carried out and the system still does not perform as expected, contact your local distributor or Expo Technologies.

Section 3: Application Suitability

MiniPurge[®] systems are certified for use in hazardous locations, where the hazardous location is non-mining (above ground) and the hazard is caused by flammable gasses, vapours or dust. Depending on the model the systems may be used in IECEx and ATEX Zone 1 and/or Zone 2 - Categories 2 and 3 respectively.

MiniPurge[®] systems may be used for hazards of any gas group. Apparatus associated with the MiniPurge[®] system, such as intrinsically safe signalling circuits and flameproof enclosures containing switching devices may be limited in their gas group. The certification documentation supplied with any such devices must be checked to ensure their suitability.

This system is primarily designed for use with compressed air. Where other inert compressed gasses are used (Nitrogen, for example) the user must take suitable precautions so that the build up of the inert gas does not present a hazard to health. Consult the Control of Substances Hazardous to Health (COSHH) data sheet for the gas used. Where a risk of asphyxiation exists, a warning label must be fitted to the pressurized enclosure.

The following materials are used in the construction of MiniPurge[®] systems. If substances that will adversely affect any of these materials are present in the surrounding environment, please consult Expo Technologies for further guidance.

Materials of Construction			
Stainless Steel	Aluminium	Acrylic	
Mild (Carbon) Steel	Nylon	Silicone	
Brass	Polyurethane	Neoprene	
ABS	Polycarbonate	Polyester (glass filled)	

Section 4: Description and Principle of Operation

The MiniPurge[®] system is pneumatic in operation, with electrical interfaces.

Purge and pressurization is a method of protection used in Zone 1 (21) and/or Zone 2 (22) hazardous locations to ensure that the interior of an enclosure is free of flammable gas. Addition of a MiniPurge[®] system allows the electrical equipment within the enclosure to be used safely in a hazardous location.

The principle of purge and pressurization is as follows:

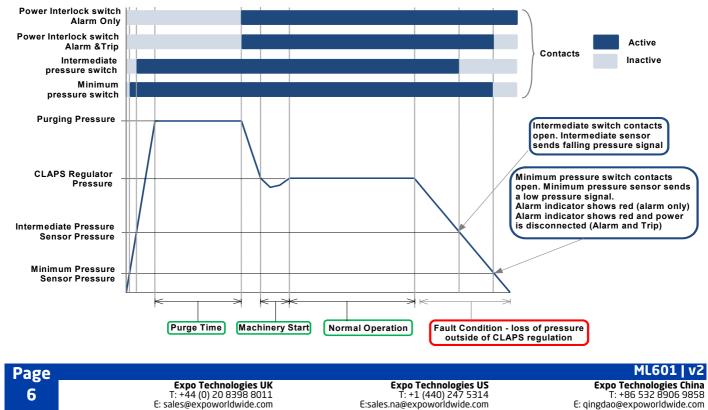

- Clean compressed air or inert gas is drawn from a non-hazardous location.
- The interior of the pressurized enclosure is flushed to remove any hazardous gas or dust.
- This is introduced into the pressurized enclosure to keep the internal pressure at least 0.5 mbarg above the external pressure.
- Whilst pressurized, flammable gas cannot enter the enclosure from the environment.

Prior to switching on the power to the electrical equipment, the enclosure must be purged to remove any flammable gas that might have entered the enclosure before pressurization. Purging is the process of removal contaminated air and replacement with air (or inert gas) known to be free from flammable gas. The duration of this purge process is normally ascertained by performing a purge test.

At the end of the purge cycle the system automatically switches to leakage compensation mode. The Purge Outlet Valve is closed and the airflow is reduced but remains high enough to compensate for the leakage of air from the enclosure whilst maintaining the minimum over pressure state.

In the event of pressure failure within the pressurized enclosure the system will raise an alarm in the form of visual indicators and a volt free contact depending on the specification of the system. The default action on loss of pressurization is alarm and automatic disconnect of power (A&T - Alarm and Trip). This can be changed by the customer to Alarm Only (/AO), please refer to section titled Main Components.

The MiniPurge[®] system incorporates a Closed Loop Automatic Pressurization System (CLAPS). This allows the system to detect a rise or fall of the enclosure's internal pressure and adjust the leakage compensation rate accordingly. Pressure variations are more likely during sudden start up of large rotating electrical machines but can also be caused by changes in running temperature. This system has been specifically designed to maintain a stable internal pressure within the enclosure.

Pressure characteristics during purge and pressurization of a pressurized enclosure using a MiniPurge[®] system that incorporates a CLAPS system:

Section 5: Main Components

Air Supply Filter / Regulator

The unit is provided with a 40 µm liquid / dust filter element as a precaution. The user of the MiniPurge[®] system must ensure that air supply is to the quality stated in Air Supply Quality paragraph found in the Installation of the System section.

Logic Air Supply Regulator

This device provides the system with a stable air supply pressure to the logic system and allows consistent operation. The pressure level is factory set to 2.5 barg (36 psig) and can be verified by means of the integral pressure gauge.

Minimum Pressure Sensor

This monitors the pressure inside the pressurized enclosure. When the pressure is below the minimum required for safe operation, the pressure sensor causes the system to reset and the Alarm / Pressurized indicator turns **Red**. The sensor is factory calibrated and set to operate in falling pressure at or above the minimum specified pressure.

Purge Flow Sensor

The Purge Flow Sensor monitors flow through the Purge Outlet Valve. At correct purge flow rates, above the minimum specified for purging, the sensor sends a signal that activates the purge timer. This sensor is factory calibrated to operate on falling flow rate at or above the minimum specified purge flow rate.

Intermediate Sensor

This sensor monitors the pressure inside the pressurized enclosure. It senses when the pressure is drops and provides early warning before the low pressure sensor trips the system.

High Pressure Sensor

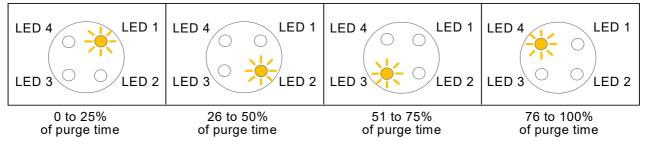

This sensor monitors the pressure inside the pressurized enclosure. When the pressure reaches the pressure setting, this sensor sends a signal to cut the pilot signal operating the volume booster until the pressure falls below the setting of the sensor.

Electronic Purge Timer

When both the enclosure pressure and the purge flow rate are correct, the Purge Flow Sensor activates the timer and the electronic timer starts. The timing period is selected using switches mounted on the timer module.

Note: Setting the timer to 00 minutes will cause infinite purging; the cycle will never complete.

During timing, the percentage of the purge cycle is indicated by four LEDs which flashes sequentially while the timer is running.

The Electronic Timer contains an intrinsically safe battery pack that needs regular replacement. See Commissioning section.

Purge Complete Valve

This valve receives a signal from the purge timer that indicates the completion of the purge cycle and verifies that the pressurization signal is still present. If both conditions are satisfied a signal is sent to indicate that the purge is complete. This performs two functions: to turn on the electrical supply to the pressurized enclosure and to reduce the high purge flow rate to leakage compensation mode. It also provides a hold-on signal that maintains the leakage compensation mode with the power switch on, even when the purge timer has reset ready for the next purge cycle.

OR Gate

This device provides the Purge Complete Valve with the hold-on function referred to previously. When either the timed-out signal or the purge complete signal is present it allows the pilot signal to be sent to the purge complete valve.

Alarm Only Circuit (/AO)

If the pressure in the pressurized enclosure is too low the system will normally cut off electrical power to it. In certain circumstances, where local codes of practice allow, the system can be altered to provide a hold-on circuit that will maintain the electrical power supply to the pressurized enclosure while also providing a pressure failure alarm. The user must respond to the alarm and either restore the pressure to the pressurized enclosure or otherwise make the installation safe; for example, cut off the electrical supply. The decision to use the Alarm Only facility, and the allowable length of time for non-pressurized operation, is the responsibility of the user.

Warning: It is potentially dangerous to energise the pressurized enclosure in an non-pressurized condition when it is known that there is potentially explosive gas or dust in the hazardous location.

Visual Indicators

Visual indicators are fitted to provide status information to the operator.

Alarm / Pressurized Indicator

Green*	Pressurized
Red 🔴	Pressure Alarm (enclosure pressure low)

System Purging Indicator

Black*	Purge flow too low (not in purge mode)
Yellow (flashing) 🕒	Purging (flow above minimum)

* The Green — / Black — combination indicates normal operation of the pressurized enclosure after the initial purging cycle has been completed.

Power Interlock Switch

This flameproof power switch is activated by the signal from the Purge Complete Valve. This activation can be used to turn on the electrical supply to the pressurized enclosure. The cable from the switch is terminated in the /PA terminal box.

Alarm / Pressurized Switch

This flameproof switch is operated by the pressurized signal. It allows a remote electrical system status indicator to show either pressurized or a pressure failure alarm. The cable from the switch is terminated in the /PA terminal box.

Page 8

System Purging Switch (Optional)

This switch is operated by the purge flow signal that allows a remote electrical system status indicator to signal that the system is purging; sometimes referred to as "purge-in-progress". The cable from the switch is terminated in the /PA terminal box.

Intermediate Switch

This is a flameproof switch which is activated by the signal from the Intermediate Sensor. The cable from the switch is terminated in the /PA terminal box.

High Pressure Switch (Optional)

This switch is operated by the signal from the High Pressure Sensor. It allows a remote electrical system status indicator to show whether the pressure inside the enclosure has reached the pressure setting of the high Pressure Sensor. The cable from the switch is terminated in the /PA terminal box.

Purge Valve

This changeover valve selects between purge air flow or leakage compensation. It is sized to allow sufficient air into the enclosure during purging based on: the specified air supply pressure range, the minimum specified purging outlet flow rate +10% and the expected leakage rate from the pressurized enclosure. At the end of the purge cycle, the purge valve closes in response to the "Purge Complete" signal; it remains in the closed position until the next purge cycle is initiated.

Purge Flow Regulator

This valve restricts the purge flow to the minimum required flow rate. The Purge Flow Regulator must be readjusted during commissioning.

CLAPS Sensor

This sensor monitors the pressure within the pressurized enclosure and sends a control signal to the CLAPS Regulator. The normal running pressure must be determined prior to system start-up so that the CLAPS Sensor may be set to the level required to control the CLAPS Regulator.

CLAPS Regulator

This is the regulator that controls the leakage compensation air flow into the enclosure after the purging is complete. It either increases or decreases the air flow into the enclosure as appropriate to maintain a stable running pressure. The CLAPS Regulator must be set at the time of commissioning.

Relief Valve Unit

The Relief Valve Unit allows the purge air to exit the enclosure safely via a built-in spark arrestor. This spark arrestor is designed to prevent the emission of arcs, sparks and incandescent particles produced within the pressurized enclosure.

Purge air passes through the Relief Valve Unit; the preset pressure differential across the appropriate orifice ensures that the purge flow sensor is activated once the selected purge flow has been attained.

During the purge cycle a pneumatic cylinder operates the Purge Outlet Valve that lets the air from inside the enclosure exhaust through the Relief Valve Unit. When the system changes to leakage compensation mode, the Purge Outlet Valve is closed and the enclosure sealed.

The Relief Valve Unit has an in-built relief valve. This is sized to ensure that, if the air supply pressure rises up from the specified maximum, the internal enclosure pressure will not exceed the specified maximum working pressure of the pressurized enclosure.

/PA Terminal Box

The Terminal Box is increased safety (Ex e) certified and incorporates the terminal connection points for the alarm and interlock switches. All contacts provided are volt free (dry).

Cable entry methods (for example conduit or cable glands) must also be certified to IECEx, ATEX and/or INMETRO standards (and must match the certification scheme for the motor). The main requirement is that IP66 (or better) ingress protection must be provided by use of seals or washers.

Thermostat and Heater

This Expo MiniPurge[®] system is equipped with an Ex d certified heater for temperature maintenance when ambient temperatures drop below -10°C. The heater is thermostatically controlled via an external Ex d certified thermostat, a 240Vac supply must be maintained at all times when the MiniPurge[®] system is in use.

Temperature Sensors

The ambient temperature of the system and the purge air temperature are to be monitored via the provided temperature sensors. These sensors are PT00 RTDs and they are connected to terminals in the main terminal box. Each RTD has 4-wire capability, but the user may choose to use 2-, 3- or 4-wire connections as preferred so long as that circuit can confirm operation of the system within the certification envelope (internal temperatures above -20°C, in an external ambient of -60°C). The connected circuit must be selected and installed in compliance with local codes of practice for intrinsic safety.

Section 6: Installation of the System

The MiniPurge[®] is designed for use under normal industrial conditions of ambient temperature, humidity and vibration. Please consult Expo before installing this equipment in conditions that may cause stresses beyond normal industrial conditions. The MiniPurge[®] system must be installed by a competent person in accordance with relevant standards, such as IEC / EN 60079-14, and any local codes of practice.

The MiniPurge[®] control unit should be installed either directly on, or close to the pressurized enclosure. It should be installed such that the system indicators and certification labels are in view.

All parts of the system carry a common serial number. If installing more than one system, ensure that this commonality is maintained within each system installed.

Relief Valve Unit

To achieve effective purging, the points where air enters and exits the pressurized enclosure should normally be at opposite ends of the enclosure. The RLV unit must be mounted vertically and there should be a minimum clearance of 300 mm (12") around the spark arrestor (purge outlet).

It is important that the interior and exterior of the spark arrestor is kept clean and debris is not allowed to accumulate; this might affect the calibration of the device. In particular, the exterior of the spark arrestor should not be painted or blocked in any way.

Air Supply Quality

The MiniPurge[®] system should be connected to a protective gas supply, which is suitable for purging and pressurization.

The supply pipe connection to the MiniPurge[®] must be appropriate for the maximum input flow rate for the application.

The air supply must be regulated at a pressure less than the maximum stated inlet pressure.

The air supply must be: clean, non-flammable and from a non-hazardous location. The air should be of Instrument Air Quality. Although the purge control system will operate with lower air quality, its operational

life will be adversely affected. The equipment that is being protected by the MiniPurge[®] may also suffer because of poor air quality.

With reference to BS ISO 8573-1: 2010, Instrument Air is typically specified as:

Particle Class 1

In each cubic metre of compressed air, the particulate count should not exceed 20,000 particles in the 0.1 to 0.5 micron size range, 400 particles in the 0.5 to 1 micron size range and 10 particles in the 1 to 5 micron size range.

Humidity or pressure dew point

The dew point, at line pressure, shall be at least 10 °C below the minimum local recorded ambient temperature at the plant site. In no case, should the dew point at line pressure exceed +3 °C.

Oil Class 2

In each cubic metre of compressed air, not more than 0.1mg of oil is allowed. This is a total level for liquid oil, oil aerosol and oil vapour.

When an inert gas is being used to supply the purge system, risk of asphyxiation exists. Refer to Application Suitability section.

Before connection of the air supply to the purge system, the supply pipe work should be flushed through with instrument quality air to remove any debris that may remain in the pipes. This must be carried out for at least 10 seconds for every meter of supply pipe.

Unless a supply shut-off valve has been fitted to the MiniPurge[®] system, an external shut-off valve with the same, or larger, thread size as the Control Unit inlet fitting should be fitted by the installer to prevent any restriction of purge flow.

The purge air from the MiniPurge[®] Control Unit should be piped within the pressurized enclosure to ensure purging of potential dead air spots.

The purge system is fitted with an internal regulator factory set to 4.2 bar feeding the logic regulator.

Pipe Work

If the MiniPurge[®] is not connected directly to the pressurized enclosure, pipe work and fittings used to connect the Control Unit to the pressurized enclosure should be either metallic or appropriate to the environment into which the system is installed. No valve may be fitted in any signal pipe connecting the Control Unit to the pressurized enclosure. This pipe work must be fitted in accordance with local codes of practice where relevant.

Multiple Enclosures

This system is suitable for the purge and pressurization of the primary pressurized enclosure and its associated terminal boxes.

Provision and Installation of Alarm Devices

When the pressure inside the pressurized enclosure is above the minimum, the Minimum Pressure Sensor returns a positive (**pressurized**) signal causing the alarm indicator on the control unit to change from **red** to **green**.

When the pressure falls below the minimum permissible the positive (**pressurized**) signal is removed. This absence of signal indicates a **low pressure alarm** condition and causes the alarm indicator on the control unit to go from **green** to **red**.

There are volt free (dry) contacts available within the terminal box for remote usage.

The user must make use of this alarm facility in accordance with the local code of practice for Action on Pressure or Flow Failure. Most codes include the following recommendations:

- Zone 1 Installations: Alarm and Automatic Trip of Power.
- **Zone 2 Installations:** Alarm Only on pressure or flow failure with power being removed manually.

Power Supplies and their Isolation

All power entering the pressurized enclosure should have a means of isolation. This requirement also applies to any external power sources that are connected to the equipment such as volt-free (dry) contacts within the pressurized enclosure. This is commonly achieved using the Power Interlock Switch.

Power Interlock Switch

This switch is a Double Pole Normally Open, double-break switch: it provides two independent contacts that should be connected in series and used to isolate the power. This can be achieved using switchgear or other suitable switching device. These contacts are terminated and accessible to the user in the Ex e terminal box.

It is the responsibility of the user to ensure that the switch is only operated within appropriate technical limits.

The switch must be replaced after any short circuit that occurs within the main circuit; the switch is a piece of encapsulated equipment and as such it is not possible to check the state of the contacts. Technical modifications to the switch are not permitted.

Prior to commissioning, check that the Ex e terminal box is clean, the connections have been made properly, the cables laid correctly and all screws in the terminals are secure.

In all cases the application and isolation of power must be controlled by the MiniPurge[®] system using the power interlock signal.

No switches are permitted between the power switch and the MiniPurge[®] system other than an authorized manual override circuit.

The safe use of this switch is the responsibility of the user, all electrical installations must conform to local codes of practice.

Exception

Power to apparatus that is already suitable for use in hazardous locations need not be isolated by the MiniPurge[®] system.

Section 7: Commissioning

Commissioning the System

Note: The steps 12 and 16 to 22 represent detailed commissioning tests

The following equipment is needed for this process:

- Continuity meter
- Gauge manometer (0 to 200 mbarg)
- Differential manometer
- 2 off 4mm plugs

If, after commissioning, the system does not perform as expected, refer to the Fault Finding Section.

Follow the steps as outlined:

- 1. Connect power to the heater via terminals 1 (Live), 4 (Neutral) and where required 3 (Earth) of the Ex d junction box and check continuity across terminals. An earth terminal is also provided within the junction box if required. Purging is permissible only when an internal temperature of -10°C or greater has been validated by purge environment RTD sensor.
- 2. Check all connections and that the Relief Valve Unit is fitted correctly with an unobstructed path to the purge exhaust.
- 3. Set CLAPS regulator and Purge Flow Regulator to 0.
- 4. Fully open external supply shut-off valve where fitted.
- 5. Check that the internal logic pressure gauge reads 2.5 barg / 36 psi / 250 kPag.
- 6. Check that the pressure gauge on main air supply reads 4.2 barg / 61 psi / 420 kPag.
- Check that the Pressure Relief Valve is correctly set by isolating the High Pressure Sensor and Purge Outlet Valve. To do this locate High Pressure/Open Purge Outlet Signal bulkhead. Follow nylon tube back to the ypiece connector. Remove tube and plug.
 - Remove red plug from the top of the Minimum Pressure Sensor and connect a gauge manometer.
 - Raise the internal pressure by turning the CLAPS regulator clockwise till the Low-Pressure Alarm Indicator turns green. This activates the Purge Flow Regulator.
 - Slowly open the Purge Flow Regulator until the Pressure Relief Valve opens. This is the set point.
 - This test can be carried out several times to ensure repeatability and compliance. Refer to the Maintenance of the System section if the Relief Valve needs recalibrating.
- 8. Reset CLAPS regulator and Purge Flow Regulator to 0.
- 9. De-isolate the High Pressure Sensor and Purge Outlet Valve.
- 10.Connect a differential manometer to the test points on the flow sensor.
- 11.To check sensor calibration
 - Raise the internal pressure by turning the CLAPS regulator clockwise until the Low-Pressure Alarm Indicator turns green. This will activate the Purge Flow regulator & Purge Outlet Valve. The pressure will fluctuate as the Purge Outlet Valve opens/closes. This is normal.
 - Gradually open the Purge Flow Regulator until System Purging Indicator **flashes yellow**.
 - Gradually close Purge Flow Regulator Valve until the purging indicator stops **flashing yellow**.
 - Take a reading from pressure gauge.

12.To set the purge flow rate:

• Raise the internal pressure by turning the CLAPS regulator clockwise until the Low-Pressure Alarm Indicator turns green. This will activate the Purge Flow regulator and Purge Outlet Valve. The pressure will fluctuate as the Purge Outlet Valve opens/closes. This is normal.

ML601 | v2 Expo Technologies UK T: +44 (0) 20 8398 8011 E: sales@expoworldwide.com

- Gradually open the Purge Flow Regulator until System Purging Indicator flashes yellow.
- The flashing yellow indicator confirms the timer has started.
- The differential pressure should be greater than 6.4 mbarg.

• The relief value is supplied with different orifice plates for the specified flow rate. This orifice plate is held in position by two M3 screws and can easily be changed by removing the large cover plate from over the outlet value assembly and screws.

Warning: When opening the Purge Flow Regulator, ensure the over pressure within the enclosure does not exceed the pressure relief valve setting.

- 13. The purge timer will start as soon as the Purging Indicator **flashes yellow**. Check that the time delay between the indicator turning to **yellow** (**flashing**) and returning to **black** is not less than the minimum time required for complete purging of the pressurized enclosure. Times in excess of minimum are permitted.
- 14.After the purge has been completed, the Purge Outlet Valve will close and the air flow into the pressurized enclosure will be controlled by the CLAPS Regulator. The initial setting may be too high or too low.
- 15.Gradually turn the CLAPS Regulator anti-clockwise to reduce enclosure pressure.
- 16.Reduce regulator until intermediate sensor causes contacts to open.
- 17. Check reading on manometer matches calibration label on pressure sensor.
- 18.Continue to reduce the CLAPS Regulator to test the minimum pressure sensor.
- 19.To check operation of Minimum Pressure Sensor, check readings on manometer as system will automatically re-purge when it reaches minimum pressure.
- 20.While the system re-purges, return the CLAPS Regulator to the initial setting.
- 21.If the minimum pressure is below the set point, refer to the Recalibration section
- 22.If the setting is too high, continual rising and falling of the enclosure pressure will be seen as the CLAPS Regulator automatically shuts off and reinstates the flow. The CLAPS Regulator should be adjusted to reduce the flow into the pressurized enclosure by turning the adjuster screw anti-clockwise.
- 23.If the initial setting is too low the CLAPS Regulator may not provide enough air flow causing a gradual decline in enclosure pressure. To increase the flow into the pressurized enclosure, adjust the CLAPS Regulator by turning the adjuster screw clockwise.
- 24.To test the CLAPS settings, create a leak in the system by removing a bolt or loosening a gland plate in order to create a 15mm hole. Remember to replace bolt or retighten gland plate after testing.
- 25.The setting of the CLAPS Sensor is factory calibrated to the normal working pressure expected in the pressurized enclosure, typically 10 mbarg. The pressure in the pressurized enclosure should be stabilized as close as possible to this figure. This can be checked by a manometer attached to the minimum pressure sensor.

26.Remove the air supply to the system, remove all test equipment and replace all plugs.

Normal Operation

For normal operation of the system, after commissioning has been carried out it is possible to turn the air supply valve on or off to start or stop the system. After this, the purge and pressurization sequence is automatic.

Section 8: Maintenance of the System

General maintenance

The maintenance of the system outlined in this manual should be supplemented with any additional requirements set out in appropriate local codes of practice.

The following checks should be carried out every 6 - 36 months dependent on environment according to IEC / EN 60079-17

- Tests outlined in the Detailed Commissioning section.
- Ensure that the Relief Valve Unit is free from contamination prior to making any adjustment. To do this:
 - Remove large cover plate using a 8 mm spanner (wrench).
 - Check that the interior and all components are clean and free from contamination.
 - Replace large cover plate.
- Check the condition of the air supply filter element. Clean or replace as necessary.

Additional maintenance checks

The following additional checks are recommended at least every 3 years:

Check that:

- Apparatus is suitable for use in the hazardous location.
- There are no unauthorised modifications.
- The air supply is uncontaminated.
- The interlocks and alarms function correctly.
- Approval labels are legible and undamaged.
- Adequate spares are carried.
- The action on pressure failure is correct.

Maintenance of Electronic Timer

This should be carried out every 3 years.

- The intrinsically safe battery pack associated with the electronic timer should be replaced and the commissioning tests repeated.
- After the timing phase has elapsed, the battery may be hot-swapped in the hazardous location without affecting the operation of the MiniPurge[®] system

Re-calibration of the Relief Valve Unit

Warning

Incorrect adjustment of the Relief Valve Unit can lead to significant over pressure and result in damage to the enclosure.

If maximum pressure setting is reached, stop adjustment, and reduce the pressure.

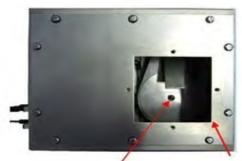

To perform the following adjustments, an 8 mm spanner (wrench) and a 2.5 mm hex key will be required. Ensure that the Relief Valve Unit is free from contamination prior to making any adjustment. To do this:

- Remove large cover plate using an 8 mm spanner (wrench).
- Check that the interior and all components are clean and free from contamination.
- Replace large cover plate
- To adjust the lift off pressure of the Relief Valve:
- Attach test equipment as described in the Commissioning Section.

ML601 | v2 Expo Technologies UK T: +44 (0) 20 8398 8011 E: sales@expoworldwide.com

- Remove small cover plate.
- Whilst holding the central adjustment screw in position using the hex key, loosen the retaining nut.
- Adjust the hex key clockwise to increase, or anti-clockwise to reduce the lift off pressure.
- Before testing, retighten the locking nut whilst holding the adjustment screw in place.
- Carry out the commissioning tests to check the correct setting of the relief valve after adjustment.
- The adjustment is sensitive, and it is recommended that a ¹/₄ turn (maximum) adjustments are applied between tests.

Allen Screw and Lock NUT

Removing the small cover plate to set the RLV opening pressure

Orifice Plate

Re-calibration of the Pressure Sensors

The brass nozzle on the sensor is sealed into position using Loctite thread sealant. If the thread has seized up, remove to a safe area and heat slightly to soften prior to making any adjustment. This prevents potential damage to the brass of the nozzle.

- Disconnect pipe work from the sensor, including pipe located below the sensor.
- Remove sensor by unscrewing anti-clockwise.
- The nozzle is located under the sensor.
- The adjustment is sensitive, turn the nozzle in $1/_8$ of a turn step.
- Turn clockwise to reduce the pressure setting and anti-clockwise to increase.
- Replace sensor, screwing clockwise.
- Reconnect all pipe work.

Section 9: Fault Finding

General Information

If you are having problems that cannot be corrected using one of the methods described, please call Expo or your supplier for further assistance. If the system is less than 12 months old, parts under warranty should be returned to Expo for investigation. A full report of the fault and the system serial number should accompany the parts.

It is common for problems with the MiniPurge[®] system to be caused by contamination of the air supply with oil, water, or dirt. To prevent these problems, the air supply must contain a dust filter and a water filter. This will ensure that the air is instrument quality and protect both the purge system and the equipment being purged. This filtration system is not provided by Expo and must be sourced separately.

Contamination can enter the system from a number of sources. To prevent this, it is essential that the procedures described in the Installation section are carried out prior to first use of the system. These procedures should also be carried out following any disconnection and re-connection of the pipe work. Failure to perform these procedures may cause damage to the system that will not be covered by the warranty.

The system has been designed for ease of fault finding and many of the components fitted are plug-in or chassis mounted. Check components by substitution only after establishing that such action is necessary.

Before carrying out the fault finding procedures, ensure that:

- Both the main air pressure to the system and for Motor Purge Systems, the regulated pressure to the logic manifold are as specified on the settings sheet.
- Air pressure does not drop below the minimum supply pressure during purging; most faults reported are due to insufficient air supply during the purge cycle.

System purges correctly but trips and auto re-purges at the end of the purge time.

This is a result of the pressure within the pressurized enclosure being below the minimum pressure sensor setting. The pressure can be checked using a manometer. The most common causes of this problem are outlined below.

Fault Location	Cause	Solution
Pressurized Enclosure	There is debris on the face of the Relief Valve disk held in place by the magnet.	Remove debris and ensure RLV disk is clean.
	Enclosure leaking excessively.	 Ensure all doors and covers are closed and that all conduit and cable glands are properly sealed. Seal any other leaks.
	Pressure sensing tube damaged.	Replace tubing.
CLAPS Regulator	The CLAPS Regulator setting is too low.	 Increase the setting of the CLAPS regulator to raise the pressure in the pressurized enclosure after purging. To do this, turn clockwise.
MiniPurge [®] Control Unit	the Minimum Pressure Sensor setting has drifted above the CLAPS setting	 The Minimum Pressure Sensor needs re-calibrating. Refer to Re-calibration of Pressure Sensors in the Maintenance section

Relief Valve opens (continuously or intermittently)

Fault Location	Cause	Solution
Pressurized Enclosure	Enclosure pressure is too high due to CLAPS Regulator being open to far.	Adjust the CLAPS Regulator.
Relief Valve Unit	Debris on the Relief Valve disk allowing air to leak from the valve.	Remove Relief Valve cover and clean the valve disk.

System enters purging but purge indication does not occur

Fault Location	Cause	Solution
inadequate air supply pressure.		Static pressure of 4 barg must be maintained during purge
	Often due to pressure drop in the supply pipe.	Check air supply pressure at the inlet to the control unit.
		Ensure that the supply pipe bore is suitable for the flow rate
Pressurized Enclosure	Excessive leakage from the pressurized enclosure.	 Check around the enclosure while purging is taking place. Total leakage at purge outlet valve
		should not exceed 10% of purge flow sensor setting.
		Check for leakage down cables and conduit.
Pipe Work	Tubing from Relief Valve flow	Ensure fitting nuts are tightened.
	sensing point not airtight.	Check for tube damage.
		Repair as necessary.
Relief Valve Unit	Relief Valve opening during purge.	Check enclosure pressure on start up is less than Relief Valve lift off pressure.
MiniPurge Control Unit	Flow sensor setting incorrect.	Check the pressure is correct on the flow sensor.

System begins purging but cycles fail to complete

Fault Location	Cause	Solution
Electronic Timer	Time set to 00	Reset timer to correct purge time.
	The intrinsically safe battery pack is discharged	Replace as necessary.

Section 10: Recommended Spares List

Part Number	Description
S0030/606	Purge flow sensor factory set to 6.4 mbarg
S0030/016	Minimum Pressure sensor, must be factory set to the value as stated on the Customer Test and Inspection Sheet
HSI-0160-000	Intermediate pressure sensor
AGM-PA00-123	CLAPS Sensor must be factory set to the value as stated on the Customer Test and Inspection Sheet
S0015/018	Pressure gauge (Air Supply Pressure), 0 - 10 barg
S0015/135	Miniature gauge (Logic Pressure), 0 - 4 barg
AGE-GE00-168	Electronic Timer Assembly c/w potted Timer Switch
ETM-IS31-001	IS Battery Pack for Electronic Timer Module

Section 11: Glossary

Acronym	Definition
A&T	Alarm and Trip
AO	Alarm Only
CLAPS	Closed Loop Automatic Pressurization System
CU	Control Unit
ET	Electronic Timer
FCV	Flow Control Valve
IS	Intrinsically Safe
LC	Leakage Compensation
PA	Power and Alarm
RLV	Relief Valve Unit

No.: 2020312304000830

Product information:

1. This certificate covers the following models:

- 1XLC cs DS SS AA MO FM OA TW

Nomenclature:

1	X	LC	CS	DS SS AA MO FM OA TW
a	b	CC	mm	Option codes

a	Size or Capacity Option codes (Added only if used)
1	MiniPurge with Purge Flow Capacity up to 225 NL/min
2	MiniPurge with Purge Flow Capacity up to 450 NL/min
3	MiniPurge with Purge Flow Capacity up to 900 NL/min
4	MiniPurge with Purge Flow Capacity up to 2000 NL/min
5	MiniPurge with Purge Flow Capacity up to 6000 NL/min
6	MiniPurge with Purge Flow Capacity up to 8000 NL/min
7	MiniPurge with Purge Flow Capacity above 8000 NL/min
b	Pressurization Type
Х	X Pressurization
Y	Y Pressurization
Z	Z Pressurization
cc	Action after initial purging
LC	Leakage Compensation only after initial High Purge
CF	Continuous Flow (same flow rate during and after purging)
CF2	Two Flow CF system with initial High Purge rate but only one orifice
CFHP	Continuous (lower) Flow after initial High Purge

CN 0000298

CERTIFICATE FOR CHINA COMPULSORY PRODUCT CERTIFICATION (Annex)

D 0

No.: 2020312304000830

DP	Dust Protection (pressurization only)
mm	Material of the Control Unit Enclosure
al	Aluminium alloy
CS	Mild steel, painted
SS	Stainless steel
bp	Back plate only
co	Chassis only
pm	Panel mounting
nm	Non-metallic
Option code	es (Added only if used)
AA	Active Alarm output fitted
AC	Alarm cancellation circuit
AO	"Alarm Only Action" on Pressure or Flow Failure
AS	Alarm "Action on Pressure or Flow failure", Selector valve
CS	Containment System Monitor
DS	Door Switch Power Interlock fitted
DT	Delayed Trip after Pressure or Flow failure
ES	Electronic Timer with EPPS
ET	Electronic Timer (not EPPS option)
FM	Flow Meter(s) fitted
H6	High Temperature Tamb -20°C to +60°C, Air Supply Max Temp +60°C
H7	High Temperature Tamb -20°C to +60°C, Air Supply Max Temp +70°C
HP	System LC or CF with High Pressure Sensor
IS	Internal Switches suitable for Ex i circuits
LS	Local Sensing
LT	Low Temperature

Issued on: 2020-11-04

CERTIFICATE FOR CHINA COMPULSORY PRODUCT CERTIFICATION

(Annex)

No.: 2020312304000830

МО	Manual Override fitted
MT	Mechanical Purge or Delay timer
OA	On/Off switch controlling Protective gas and logic supply
OB	On/Off switch controlling logic supply only
00	On/Off switch controlling Protective gas supply only
os	Outlet (Orifice) Selector valve
OV	Outlet valve, pneumatically operated
PA	"Ex" switch(es) built-in, with/without "Ex" junction box
PC	PE Pressure Control Leakage Compensation Valve (CLAPS System)
PO	Pneumatic Output signals for Power and Alarm control
SP	Secondary Pressurization supply options
SS	Separate Supply for Protective gas and Logic air
τw	Twin (or more) outputs for two or more separate pressurized enclosures purged in parallel
DXXX	Special design for specific flow rates, or other non-certification related options

Relief Valve - The MiniPurge controller is supplied with an optional overpressure relief valve, which is to be fitted to the Ex p protected apparatus to prevent an internal overpressure above the maximum overpressure rating of the apparatus. There are 14 models of relief valve; the designation of each relief valve refers to its nominal bore in mm, as follows: RLV3, RLV6, RLV9, RLV12, RLV19, RLV25, RLV26, RLV52, RLV36, RLV75, RLV104, RLV125, RLV150 and RLV200;

The outlet of each relief valve is fitted with a spark arrestor, of which there are four optional types:

Metal foam
 Tortuous path with at least 4 x 90° or 2 x 180° bends
 Multi-layer stainless steel mesh

No.: 2020312304000830

(4) Knitted mesh

Page 4 of 6

Outlet Orifice - Three types of orifice are used:

- Threaded Orifices e.g. ¼" NPT or 2" BSP with a built in spark arrester. These are selected to maintain a desired back pressure within the Ex p protected apparatus when used with the Continuous Flow options. The designation of each outlet orifice indicates the nominal inlet diameter. The designations are as follows: SA3, SA6, SA9, SA12, SA19, SA25, SA32, SA38 and SA50
- ② Plain holes in the Relief Valve disk, sized according to the flow rate required
- 3 Replaceable orifice type SAU**
- High Pressure Sensor for CF Systems (HP code) If the pressure in the pressurized enclosure rises above the setting of the High Pressure sensor, the controller resets cutting the power to the enclosure. On detecting the overpressure an optional facility is available for the generation of an alarm or indicator. On systems with a High Pressure sensor, the relief valve may be omitted.
- High Pressure Sensor for LC Systems (HP code) If the pressure in the pressurized enclosure rises above the setting of the High Pressure sensor, the purge gas flow is isolated from the pressurised enclosure. The valve isolates both the leakage compensation and the purge streams. On detecting the overpressure, an optional facility is available for the generation of an alarm or indicator. On systems with a High Pressure sensor, the relief valve may be omitted.
- Pneumatically Operated Outlet Valve The pneumatically operated outlet valve is used to positively open or close the outlet of the purged enclosure by means of a spring return pneumatic cylinder. Systems fitted with the Pneumatically Operated Outlet Valve will carry the option OV.

Note: the possible protection type of certified Ex products(components) list in Option codes(see table above) could be Ex d, Ex e, Ex ia or Ex iaD.

- Producers should organize production in accordance with the technical documents approved by the certification body.

2. Specific conditions of safety use:

- When using the AO, AS and DT options, the recommendations for the additional

CERTIFICATE FOR CHINA COMPULSORY PRODUCT CERTIFICATION (Annex)

No.: 2020312304000830

Page 6 of 6

requirements of Ex p apparatus shall be applied.

- The installer/user shall ensure that the MiniPurge Control Unit is installed in accordance with the equipment certificate that covers the combination of the pressurised enclosure(s) and MiniPurge Control Unit.

- The values of the safety parameters shall be set in accordance with the equipment certificate that covers the combination of the pressurized enclosure(s) and MiniPurge Control Unit.

- This MiniPurge Control Unit shall be incorporated into equipment and the appropriate Conformity Assessment Procedures applied to the combination. This certificate does not cover the combination.

- The purge controller, low temperature version, shall be protected by a system that ensures that it cannot be energized if the temperature of the controller logic air or purge controller falls below -20°C. This system shall utilise the RTDs that are fitted to the purge controller to provide the appropriate level of system integrity.

- Where a Vortex cooler is fitted the hot air outlet pipe shall be kept free from obstructions and blockage.

 The following routine tests are to be carried out: The vortex cooler is functioning correctly. (H6 and H7 options ONLY) The pneumatic logic isolator is functioning correctly. (H6 and H7 options ONLY)

- See instruction for other information.

- 3. Certificate related report(s):
 - Type test report: CQST2009C581
 - Factory inspection report: CN2020Q010175
- 4. Certificate change information: None

Серия RU № 0767603

1. Назначение и область применения

Сертификат соответствия распространяется на Системы контроля продувки MiniPurge, изготавливаемые по технической документации изготовителя. Системы контроля пролувки MiniPurge обеспечивают высокий поток продувочного газа, обычно сжатого воздуха. Если поток постаточен, запускается таймер продувки. После завершения времени продувки поток продувки отключается, и система контролирует более инкий раскоа, чтобы компенсировать утечну корпуса. Таким образом, внутреннее давление поддерживается выше внешнего давления, предотвращая попадание потенциально втрывоопасного газа / пара в корпус В этом состоянии система блокировки позволяет внешнему источнику питания подаваться на внутрениее оборудование либо напрямую, либо через отдельный интерфейс

Системы контроля продукки MiniPurge относятся к оборудованно группы II. II и предназначения для применения в потенциально взрывоопасных зонах и наружных установках класса 1. 2 по ГОСТ. НЕС 60079-10-1-2013 и 21. 22 по ГОСТ НЕС 60079-10-2-2013 категории IIC и ПГС в соответствии с маркировкой взрывозащиты (смотри таблицу 1), инструкциями изготовителя и другими пормативными документами, регламентирующими применение оборудования во взрывоопасных зонах.

2. Описание оборудования и средств обеспечения взрывозащиты

Идентификация типа Номер модели: 1 X LC cs DS SS AA MO FM OA TW

Обозначения = а b сс mm Пример кодов опший

а = Размер или Емкость

- I = MiniPurge с пропускной способностью продувки до 225 NI/min
- MiniPurge с пропускной способностью продувки до 450 Nl/min 3 = MiniPurge с пропускной способностью продувки до 900 NU/min
- 4 МіліРигде с пропускной способностью продувки до 2000 Nl/min
- 5 = MiniPurge с пропускной способностью продувки до 6000 NI/min
- 6 МіліРигде с пропускной способностью продувки до 8000 NI/min 7 МіліРигде с пропускной способностью продувки свыше 8000 NI/min
- b = тип создания повышенного давления Х = Х создание повышенного давления
- У создание повышенного давления
- Z Z создание повышенного давления
- сс = действие после первоначальной продувки
- LC компенсация утечки только после после первоначальной высокой продувки
- CF непрерывный поток (одна и та же скорость потока во время и после продувки)
- CF2 = двухпоточная система CF с первоначальной высокой скоростью продувки, но только одной диафрагмой СFHP - непрерывный (более низкий) поток после первоначальной высокой продувки
- DP = защита от пыли (только создание повышенного давления) тт - материал корпуса блока управления
- al = алюминисвый сплая
- ся мягкая (низкоуглеродистая) сталь с окраской
- ss нержавеющая сталь
- bp только задняя пластина
- со только шасси оп - монтаж на панели
- пт неметаллический

Опциональные коды (добавляются, только если используются)

- АА = установлен выход активного аварийного сигнала. АС - цепь отмены аварийного сигнала.
- АО действие «Только аварийный сигнал» при неисправности давления или потока. AS - аварийный сигнал «Действие при неисправности давления или потока», селекторный клапан.
- CS = блок контроля системы герметизации.
- DS = установлен дверной выключатель блокировки питания.
- DT = задержка срабатывания после неисправности давления или потока.
- ES = электронный таймер (с опцией EPPS)
- ET электронный таймер (без опции EPPS) FM = установлен измеритель(и) потока.
- HP система LC или CF с датчиком высокого давления
- 1S = внутренние выключатели, пригодные для целей Ex 1
- LS локальное сенсорное обнаружение.
- 1.Т = низкая температура.
- МО = установлен переход на ручное управление
- МТ таймер механической продувки или задержки.
- ОА выключатель включения/выключения, контролирующий подачу защитного газа в догики OB выключатель включения/выключения, контролирующий только подачу логики
- OC = выключатель включения/выключения, контролирующий только подачу защитного газа
- OS выпускной (диафрагменный) селекторный клапан
- OV выпускной клапан, с пневматическим приводом
- РА встроенный выключатель(и) «Ех», с распределительной коробкой/без распределительной коробки «Ех»
- РС = клапан компенсации утечки управление давлением РЕ (система CLAPS). РО = выходные сигналы пневматики для управления питанием и аварийными си-
- SP опция вторичной подачи для создания повышенного давления.

Конструкция систем контроля продувки MiniPurge обеспечивает их взрывобезопасность, что достигается выполнением ряда требований, в том числе

 обеспечением продувки внутрениего пространства шкафов защитных под избыточным давлением по ГОСТ IEC 60079-2-2011 в случае установки компонентов системы общепромышленного исполнения во внутренний объем шкафов.

- выполнение корпусов шкафов и блоков элементов снетем контроля продувки MiniPurge из материалов, имеющих высокую степень механической прочности. устойчивых к механическим воздействиям величивой до 7 Дж.

выполнение корпусов из материалов не содержащих более 7,5 % магния,

наличие на корпусе заземляющих зажимов.

конструкция соединения деталей, исключают возможность прорыва уплотнений или раскрытия стыков.

обеспечением степени защиты от внешних воздействий по ГОСТ 14254-2015.

конструкция и применяемые материалы для исключения возможности накопления в разряда статического электричества;

резьбовые соединения сборочных единиц, обеспечивающие взрывозащиту электрооборудования, имеют устройства для предотвращения произвольного самоослабления:

на дверцы и крышки защищаемого оборудования нанесены предупредительные надписи. "ПРЕДОСТЕРЕЖЕНИЕ! НЕ ОТКРЫВАТЬ ПРИ ВОЗМОЖНОМ ПРИСУТСТВИИ ВЗРЫВООПАСНОЙ СРЕДЫ ИЛИ ПОД НАПРЯЖЕНИЕМ» или подобное.

 монтаж, эксплуатация, ремонт и обслуживание систем контроля продувки MiniPurge должны производиться в строгом соответствии с требованиями руководства по жеплуатации. Обслуживающий персонал должен строго соблюдать требования к параметрам окружающей и рабочей сред, установленные в руководстве по эксплуатация.

 оборудование систем контроля продувки MiniPurge при применении ее по назначению и выполнении требований к монтажу и эксплуатации по ГОСТ IEC 60079-14-2013, обеспечивает безопасность, что достигается выполнением ряда требований

применением прывобезопасного электрооборудования с видами втрывозащиты "втрывонепроинцаемая оболочка" d" по ГОСТ IEC 60079-1-2011, продувка оболочки пол инбигочным давлением "p" по ГОСТ IEC 60079-2-2011, повышения апшита вида "е по ГОСТ P M2K 60079-1-2012, несробезопасная электрическая цень" "т" по ГОСТ 1316.01.1-2012, выдов вірывозащиты «терметизация компаундом «то-по ГОСТ P M2K 60079-18-2012, мадот вірывозациты «терметизация компаундом «то-по ГОСТ P M2K 60079-18-2012, мадот вір по состпаченим палит оболочками "ц" по ГОСТ IEC 60079-31-2013, конструкция которате соответствуєт пребованиям ГОСТ 1610.0-2014 и соблодением условий безопасного mousieneurs «X»

Виесение изменений в согласованные чертежи и конструкцию изделий возможно только по согласованию с ОС ООО Центр "ПрофЭкс"

Данный сертификат соответствия полтверждает соответствие требованиям взрывобезопасности ТР ТС 012/2011 и не рассматривает любые другие виды безопасности при эксплуатации оборудования.

4. Маркировка взрывозащиты

Маркировка, наносимая на оборудование, включает следующие данные. - наимснование изготовителя или его зарегистрированный товарный знах;
 наимскование изпотовителя или его зарегистрированный товарный знак; наимскование изделия;
 маркировку взрывозащиты (смотри таблицу 1);
 температуру эксплуатации (смотри таблицу 1), температуру эксплуатации (смотри таблицу 1),
- лату выпуска.
 порядковый номер изделия по системе нумерации предприятия-изготовителя, включ
 название или знак органа по сертификации и номер сертификата соответствия;
 другие данные, которые должен отразить изготовитель, если это требуется техничесі
Маркировка специальным знаком взрывобезопасности и единым знаком обращения
тарипрови специальным злаком взрывоосзопасности и единым знаком оорашения

5. Специальные условия применения

· контроллер продувки, установленная на передней части оборудования, не должна подвергаться воздействию прямых источников ультрафиолетового излучения или прямых солнечных лучей; защитный газ не должен содержать горючих газов, паров и влаги, а также агрессивных примесей

в процессе эксплуатации запрещается изменять время преллусковой продувки, пределы срабатывания блокировок по избыточному давлению и установки по величине расхода;

 перед вводом в эксплуатацию, после ремонта и профилактических работ необходимо выполнять проверки величии сигнала достижения защитным газом допустимого минимального или максимального избыточного давления, расхода защитного газа.

отключать блокировки и сигнальную систему для проведения назадочных работ разрешается только при условии отсутствия взрывоопасной окружающей среды в течение всего времени отключения блокировок

запрешается производить ремонт электронных схем, обеспечивающих искробезопасное исполнение. В случае выхода из строя, печатные платы и элементы искробезопасных электрических цепей должны заменяться новыми, поставляемыми изготовителем.

монтаж, желлуатацию, осмотр. обслуживание и реконстранования и постоянтелем. в марипрове вых «Х» следует осуществлять строго в соответствии с марипрове вых «Х» следует осуществлять строго в соответствии с руководством по эксплуатации, издоженными в сопроводительной технической документации на даное оборудование (смотри таблицу 2), а также с учетом всех требований (СОСТ IEC 60079-13-2013 и отранствания) технической документации на даное оборудование (смотри таблицу 2), а также с учетом всех требований (СОСТ IEC 60079-13-2013 и отранствания) технической документации на даное оборудование (смотри таблицу 2), а также с учетом всех требований (СОСТ IEC 60079-13-2013 и отранствания)

EC - TYPE EXAMINATION CERTIFICATE

2 Equipment or Protective System Intended for use in Potentially Explosive Atmospheres Directive 94/9/EC

3 EC - Type Examination Baseefa06ATEX0117X Certificate Number:

- 4 Equipment or Protective System: PL6** Range of Junction Boxes
- 5 Manufacturer: Hawke International
- 6 Address: Oxford Street West, Ashton-under-Lyne, Lancashire, OL7 0NA
- 7 This equipment or protective system and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.
- 8 Baseefa (2001) Ltd., Notified Body number 1180, in accordance with Article 9 of the Council Directive 94/9/EC of 23 March 1994, certifies that this equipment or protective system has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres given in Annex II to the Directive.

The examination and test results are recorded in confidential Report No. GB/BAS/Ex/TR06.0033/00

9 Compliance with the Essential Health and Safety Requirements has been assured by compliance with:

EN 60079-0:2004, EN 60079-7:2003, EN 61241-0: 2004, EN 61241-1: 2004

except in respect of those requirements listed at item 18 of the Schedule.

- 10 If the sign "X" is placed after the certificate number, it indicates that the equipment or protective system is subject to special conditions for safe use specified in the schedule to this certificate.
- 11 This EC TYPE EXAMINATION CERTIFICATE relates only to the design and construction of the specified equipment or protective system. Further requirements of the Directive apply to the manufacturing process and supply of this equipment or protective system. These are not covered by this certificate.
- 12 The marking of the equipment or protective system shall include the following :

(Ex) II 2GD Exe II Ex tD A21 T(see schedule) 80°C Tamb -60°C to (see schedule)

This certificate may only be reproduced in its entirety, without any change, schedule included.

Certificate Number Baseefa06ATEX00117X

15 Description of Equipment or Protective System

The PL6** Range of Junction Boxes consist of the type ZPL6* range of plastic empty enclosures covered by Baseefa06ATEX0116U Exe II. The junction boxes are fitted with a variety of different terminal arrangements. All the terminals are covered by their own component certificates and are coded Exe II. The terminals are listed on D9160 held on Baseefa General Technical File 0500. The actual terminals fitted to each junction box will be listed in the schedule of the instruction sheet supplied with the junction box.

The terminals must be used within their relevant temperature range, voltage and current limitations, and fitted in accordance with IEC 60079 with regard to creepage and clearance distances by Hawke International. Details on drawing C2542 describe partitioning arrangements which allow for the termination of intrinsically safe (i.s.) circuits and non i.s. circuits within the same junction box. When i.s. circuits are present an additional label is fitted to the outside of the junction box stating 'INTRINSICALLY SAFE CIRCUITS ENCLOSED'.

The maximum power dissipation within each junction box is as follows:

	Maximum Power Dissipation (Watts)										Max Cable

The maximum number of terminals which may be fitted into each junction box is calculate using the following formula:

Power = $l^2 \times N (R_t + R_c)$ Watts

Where:

- I = Actual current through the conductor up to the maximum permitted certified current of the
 - terminal when fitted in a junction box (Amps).
- N = Number of terminals
- $R_t = Terminal resistance (Ohms at 20^{\circ}C)$
- $R_c = Resistance of one conductor (Ohms at 20°C) when using a maximum diagonal cable length listed in the above table.$

Earth facilities and cable entries are described on the component certificate for the empty enclosures Basefa06ATEX0116U. A suitable certified internal rail mounted earth terminal may be used. If a 'clean earth' is required a rail mounted power terminal may be used.

When required a component certified breather, drain or breather-drain may be fitted to the junction box as specified on the component certificate Basee06ATEX0116U. When fitted the IP rating of the junction box is reduced to the IP rating of the breather drain fitted, but must be a at least IP54, and may no longer be suitable for category 2D. Breather drains must be installed in their correct orientation in the bottom face of the junction box.

Certificate Number Baseefa06ATEX0117X

Issued 11 August 2006 Page 3 of 3

Certificate Number Baseefa06ATEX0117X/1

Issued 06 July 2010 Page 1 of 2

17 Special Conditions for Safe Use

- When used under dust layers the maximum depth shall be no greater than 50mm. 1.
- 2. Unused cables entries must be fitted with the following stopping plugs: Hawke type 375 to Baseefa06ATEX0236U / IECEx BAS 06.0056U Hawke type 387 to Baseefa06ATEX0118U / IECEx BAS 06.0029U Redapt type PU-E-4 to SIRA00ATEX3091 Redapt type PU-D to SIRA00ATEX1094 Raxton types CK, CQ, CF and CB to SIRA00ATEX1073U

The enclosure is limited to the temperature range of the stopping plug fitted.

- 3. Any breathing and draining device must be installed in its correct orientation in the bottom face of the enclosure.
- 4. All terminal screws, used and unused, shall be fully tightened down by the end user.
- Insulation of conductors must extend to within 1mm of the metal of the terminal throat unless specified otherwis 5. on the terminal certificate.
- 6. No more than one single or multi-stranded lead shall be connected to either side of any terminal unless multip conductors have been joined in a suitable manner, e.g. two conductors into a single insulated bootlace ferrule, any method indicated on the terminal certificate.
- Terminals shall be installed in such a manner that the creepage and clearance distances between the terminal ar 7. adjacent components, enclosure walls and covers complying with the requirements of IEC 60079 for the rate voltage of the equipment.
- Terminal temperatures must not exceed the operating range specified on the component certificate. 8.
- 9. All terminals, and accessories such as cross-connectors, shall be installed in accordance with the termin manufactures instructions. Hawke International will supply the relevant terminal manufacturer's instructions wi each junction box covered by this certificate.
- The maximum voltage, current and dissipated power shown on the rating label must not be exceeded. 10.
- When connecting conductors of cross section below the maximum allowed for the particular terminal then the 11. maximum amps per pole must be reduced inline with the maximum amps permitted for a terminal equivalent the conductor size fitted e.g. If a terminal that can take a 10mm² conductor at 40Amps is fitted with a 4mr conductor then the current shall be reduced to a maximum of 22Amps, or the rating marked on the apparati label, whichever is the lower.

18 **Essential Health and Safety Requirements**

ANNEX to IECEx BAS 06.0028X	Issue No. 1	Date: 2014/02/11

The PL6** Range of Junction Boxes comprises the type ZPL6** range of empty glass filled polyester enclosures, covered by IECEx BAS 06.0027U Exe II, fitted with a variety of different terminal arrangements.

All the terminals are covered by their own component certificates and are coded Exe II. Drawing D9160, held on Baseefa General Technical File 0500, gives details of the permitted terminals, their rated conductor sizes and their maximum permitted current ratings when used in this application. Note that the ratings for junction box use may be lower than the maximum ratings given in the terminal certificate.

The terminals are used within their relevant temperature range, voltage and current limitations, and fitted in accordance with IEC 60079-7 with regard to creepage distances and clearances by Hawke International. A specified partitioning arrangement allows for the termination of intrinsically safe (i.s.) circuits and non i.s. circuits within the same junction box. When i.s. circuits are present, an additional label is fitted to the outside of the junction box stating INTRINSICALLY SAFE CIRCUITS ENCLOSED'.

The maximum power dissipation within each junction box is as follows:

	1. A						M	aximum	Power D	Dissipati	on (Wat	tts)						
вох	Trailing	Tdust	Tamb	Trating	Takit	Tanb	Traing	Tdust	Tamb	Trating	Tdust	Tank	Trating	Tulust	Tanb	Trating	Tdust	Tanh
TYPE	T6	80°C	-60 +40°C	Т6	80°C	-60 +55°C	Т6	80°C	-60 +65°C	T5	80°C	-60 +40°C	T5	80°C	-60 +55°C	T5	80°C	-60 +65°C
PL612		4.1			2.5	-		1.5		-	5.6	-	-	4.1	-		3.0	
PL615		6.4			4.0			2,4			8.8			6.4			4.8	
PL620		11.4	-		7.1		1	4.2			15.6			11.4	-	1	8.5	
PL626		11.4		1	7.1			4.2			15.6			11.4			8.5	
PL630		20.8	-		13.0	1		7.8			28.6			20.8		1	15.6	

The maximum number of terminals which may be fitted into each junction box is calculated using the following formula:

Power = I² x N (Rt + Rc) Watts

Where:

- I = Actual current through the conductor up to the maximum permitted certified current of the
- terminal when fitted in a junction box (Amps).
- N = Number of terminals
- Rt = Terminal resistance (Ohms at 20 DegC)
- R_c = Resistance of one conductor (Ohms at 20 DegC) when using a maximum diagonal cable length listed in the above table.

Earth facilities and cable entries are described on the component certificate for the empty enclosures IECEx BAS 06.0027U.

A suitable certified internal rail mounted earth terminal may be used. If a 'clean earth' is required a rail mounted power terminal may be used. (Earth terminals are not considered to contribute to the power dissipation.)

When required, a component certified breather, drain or breather-drain may be fitted to the junction box as specified on the component certificate IECEx BAS 06.0027U.

1. НАЗНАЧЕНИЕ И ОБЛАСТЬ ПРИМЕНЕНИЯ

Коробки распределительные типов S1...S9/MS1...MS9, S15/MS15, S17/MS17, PL6**, PL7**, EJB**, корпуса ZPL6**, ZPL7** ZS1... ZS9, колодка клеммная НТВ 6 предназначены для соединений и коммутации искроопасных электрических цепей.

Соединители типов ControlEx, InstrumEx, PowerEx предназначены для коммутации электрических цепей со смещанными омическими и индуктивными нагрузками.

Вводы кабельные типов 501/414, 501/421, 501/421/R, 501/421 Size 2K Variant, SB474, 501/423, 501/453, 501/453/RAC, 501/453/Dedicated, 501/453 Oversized, 501/452/RAC, PSG 553/RAC, ExnR 553, PR 411, PR 453, CSB 656, CSB 656/QSP, CSB656N, CSB656N/OSP, CSB656 Oversized, ICG 623, ICG 623/QSP, ICG 653/UNIV, ICG 653/UNIV/QSP, ICG 653/UNIV/P, ICG 653/UNIV/P/QSP, ICG 653 Oversized, ICG 611, ICG 611/QSP, ICG 659, 753, 755, 710, 711, 501/453/UNIV, 321, 321/R, 353 RAC, 351 RAC, 453/T, 453/RAC, 453 UNIV, 653/T, 653 UNIV, 653/UNIV/QSP, 623, 623/QSP предназначены для присоединения кабеля к взрывозащищенному электрооборулованию

Заглушки типов 475/477, М475/М477, 375, 387, 390, 487 предназначены для установки в отверстия неиспользованных кабельных вводов.

Адаптеры резьбовые типов 476, 476/1А, 476/1, 478, 470, 483, 484, 383, 482, 480, 481, 479, 490, 491, 492, 493, 494, 495, 496 предназначены для использования в качестве переходников для различных диаметров резьбовых отверстий кабельного ввода и корпуса для присосдинения кабеля к взрывозащищенному электрооборудованию.

Устройства дыхательные/дренажные типов 389, 489 предназначены для дренажа конденсата из корпусов взрывозащищенного электрооборудования.

Область применения изделий - взрывоопасные зоны помещений и наружных установок согласно Ех-маркировке, ГОСТ IEC 60079-14-2011.

3. ОПИСАНИЕ КОНСТРУКЦИИ И СРЕДСТВ ОБЕСПЕЧЕНИЯ ВЗРЫВОЗАЩИЩЕННОСТИ

Вводы кабельные типов 501/414, 501/421, 501/421/R, 501/421 Size 2K Variant, SB474, 501/423, 501/453, 501/453/RAC, 501/453/Dedicated, 501/453 Oversized, 501/452/RAC, PSG 553/RAC, ExR 553, PR 411, PR 453, CSB 656, CSB 656/QSP, CSB656N, CSB656N/QSP, CSB656 Oversized, ICG 623, ICG 623/QSP, ICG 653/UNIV, ICG 653/UNIV/QSP, ICG 653/UNIV/P, ICG 653/UNIV/P/QSP, ICG 653 Oversized, ICG 611, ICG 611/QSP, ICG 659, 753, 755, 710, 711, 501/453/RAC, 351 RAC, 351 RAC, 453/T, 453/RAC, 453 UNIV, 653/UNIV, 653/UNIV/QSP, 623, 623/QSP выполнены в корпусах с резьбой, изготовленных из латуни (латуни с никелированным покрытием) или нержавеющей стали. Внутри корпусов установлено зластичное уплотнительное кольцо, которое может быть выполнено из резины, силикона, интрила или других материалов; также внутри корпусов может быть установлено цанговое фиксирующее устройство. Для уплотнения кольца и цанти используется прикимная гайка. Конструкция вводов кабельных обеспечивает возможность разгрузки жил кабеля при растяжении и скручивании, а также крепления различных видов оплетки армированного кабеля. Габаритные и присоединительнае размеры вводов кабельных приведены в соответствующих руководствах по монтажу и эксплуатации.

Заглушки типов 475/477, М475/М477, 375, 387, 390, 487 представляют собой корпуса, изготовленные из латуни (латуни с никслированным покрытием), стали, нержавеющей стали или апоминия. Для затяжки заглушек в корпусах выполнены шестигранные выемки. Заглушки типа 475 устанавливаются снаружи корпуса. Заглушки типа 477 устанавливаются внутри корпуса.

Адаптеры резьбовые типов 476, 476/1А, 476/1, 478, 470, 483, 484, 383, 482, 480, 481, 479, 490, 491, 492, 493, 494, 495, 496 состоят из изготовленного из латуни (латуни с никелированным покрытием) или нержавеющей стали корпуса с резьбами для присоединения к кабельному вводу и корпусу взрывозащищенного оборудования.

Устройства дыхательные/дренажные 389, 489 состоят из корпуса, изготовленного из латуни (латуни с никелированным покрытисм) или нержавеющей стали, резьбой для присоединения.

Колодка клеммная НТВ 6 состоит из основания, выполненного из электроизоляционного материала, на котором установлены клеммы для зажима проводов.

Коробки распределительные типов S1...S9/MS1...MS9, S15/MS15, S17/MS17, PL6**, PL7**, EJB**, корпуса ZPL6**, ZPL7**, ZS1...ZS9 состоят из корпуса и крышки. В корпусе коробок распределительных монтируются сертифицированные взрывозащищенные колодки клеммные. На боковых поверхностях коробок распределительных устанавливаются сертифицированные взрывозащищенные вводы кабельные, заглушки, устройства дыхательные/деенажные. Между корпусом и крышкой для обеспечения защиты от внешних воздействий устанавливается уплотительная прокладка. Допустимое количество устанавливаемых вводов кабельных, колодок клеммных, заглушек, устройств дыхательных/дренажных, а также допустимое количество вводимых проводов зависят от типа и размеров коробок.

Соединители типов ControlEx, InstrumEx, PowerEx состоят из штепсельной розетки и вилки, к которой присоединяется гибкий кабель. Штепсельная розетка крепится стационарио или соединяется с гибким кабелем. В разомкнутом состоянии штепсельная розетка закрыта от пыли и влаги специальной крыпители типов ControlEx, InstrumEx, PowerEx имеют механическую или электрическую блокировку, препятствующую выведению вилки, когда ее контакты находятся под напряжением.

Подробное описание конструкции изделий приведено в соответствующих Руководствах эксплуатации.

Вурывозащищенность вводов кабельных типов 501/414, 501/421, 501/423, SB474, ExnR 553, PSG 553 RAC, 501/453, 501/453/RAC, 501/452 RAC, 501/421 Size 2K Variant обеспечивается видами взрывозащиты взрывонепроницаемые оболочки "d" по ГОСТ IEC 60079-1-2010, повышенная защита вида «е» по ГОСТ Р МЭК 60079-7-2012, видом взрывозащиты «п» по ГОСТ Р МЭК 60079-15-2010, от воспламенения пыли "t" по ГОСТ Р МЭК 60079-31-2010, и выполнением конструкции в соответствии с требованиями ГОСТ Р МЭК 60079-0-2011.

Взрывозащищенность вводов кабельных типов CSB 656, CSB 656/QSP, CSB 656N, CSB 656N/QSP, CSB656 Oversized, ICG 623, ICG 623/QSP, ICG 659,ICG 653/UNIV, ICG 653/UNIV/QSP, ICG 653/UNIV/P, ICG 611,ICG 653/UNIV/P/QSP, ICG 611/QSP,ICG 653 Oversized, 501/421/R, PR 411, 501/453 Oversized, PR 453, 501/453/Dedicated, заглушек типов 475/477, M475/M477, 375, 387, 390, 487, адаптеров резьбовых типов 476, 476/1A, 476/1, 478, 470, 483, 484, 383, 482, 480, 481, 479, 490, 491, 492, 493, 494, 495, 496, устройств лихательных/дренажных типов 389, 489 обеспечивается видами вэрывозацияты върывонепроницаемые оболочки "d" по ГОСТ Г Е 60079-1-2010, повышенная защита вида «е» по ГОСТ Р МЭК 60079-7-2012, от воспламенения пыли "t" по ГОСТ Р МЭК 60079-31-2010, повышением конструкции в соответсятвии с требованиями ГОСТ Р Коб02-011.

Взрывозащищенность вводов кабельных типов 453/Т, 453/RAC, 453 UNIV, 653/Т, 653 UNIV, 653/UNIV/QSP, 623, 623/QSP обеспечивается видами взрывозащиты взрывонепроницаемые оболочки "d" по ГОСТ IEC 60079-1–2010, повышенная защита вида «с» по ГОСТ Р МЭК 60079-7–2012, и выполнением конструкции в соответствии с требованиями ГОСТ Р МЭК 60079-0–2011.

Вэрывозащищениость соединителей типов Conlrolex, Instrumex, Powerex, заглушек типов 475/477, М475/М477, устройств дыхательных/дренажных типа 489 обеспечивается видом взрывозащиты взрывонепроницаемые оболочки "d" по ГОСТ IEC 60079-1-2010, от воспламенения пыли "t" по ГОСТ Р МЭК 60079-31-2010, и выполнением конструкции в соответствии с требованиями ГОСТ Р МЭК 60079-0-2011.

Взрывозащищенность вводов кабельных типов 321, 321/R, 353 RAC, 351 RAC, коробок распределительных типов S1...S9/MS1...MS9, S15/MS15, S17/MS17, PL6**, PL7**, EZE**, PJB, корпусов ZPL6**, ZPL7**, ZS1...ZS9, устройств дыхательных/денажных типа 389 обеспечивается повышенной защитой вида «с» по ГОСТ Р МЭК 60079-7-2012, от воспламенения пыли "t" по ГОСТ Р МЭК 60079-31-2010, и выполнением конструкции в соответствии с требованиями ГОСТ Р МЭК 60079-0-2011.

Взрывозащищенность колодки клеммной НТВ 6 обеспечивается повышенной защитой вида «с» по СТР МЛК 60079-7-2012 и выполнением конструкции в соответствии с требованиями ГОСТ Р МЭК 60079-0-2011.

4. МАРКИРОВКА

Маркировка, наносимая на коробки распределительные типов S1...S9/MS1...MS9, S15/MS15, S17/MS17, PL6**, PL7**, EJB**, корпуса ZPL6**, ZPL7**, ZS1...ZS9, колодку клеммную НТВ 6, соединители типов ControlEx, InstrumEx, PowerEx, вводы кабельные типов 501/414, 501/421, 501/421/R, 501/421 Size 2K Variant, SB474, 501/423, 501/453, 501/453/RAC, 501/453/Dedicated, 501/453 Oversized, 501/452/RAC, PSG 553/RAC, ExnR 553, PR 411, PR 453, CSB 656, CSB 656/QSP, CSB 656N, CSB 656N/QSP, CSB 656 Oversized, ICG 623, ICG 623/QSP, ICG 653/UNIV, ICG 653/UNIV/QSP, ICG 653/UNIV/P, ICG 653/UNIV/P/OSP, ICG 653 Oversized, ICG 611. ICG 611/QSP, ICG 659, 753, 755, 710, 711, 501/453/UNIV, 321, 321/R, 353 RAC, 351 RAC, 453/T, 453/RAC, 453 UNIV, 653/T, 653 UNIV. 653/UNIV/QSP, 623, 623/QSP, заглушки типов 475/477, М475/М477, 375, 387, 390, 487, адаптеры резьбовые типов 476, 476/1А, 476/1, 478, 470, 483, 484, 383, 482, 480, 481, 479, 490, 491, 492, 493, 494, 495, 496, устройства дыхательные/дренажные типов 389, 489 включает следующие данные:

знак или наименование предприятия-изготовителя;

- наименование изделия:

 порядковый номер изделия или год выпуска; - Ex-маркировку;

специальный знак взрывобезопасности:

- прелупрелительные налписи:

 температуру окружающей среды при эксплуатации; наименование центра по сертификации и номер сертификата,

и другие данные, которые изготовитель должен отразить в маркировке в соответствии с требованиями нормативной и технической документации.

5. СПЕЦИАЛЬНЫЕ УСЛОВИЯ ПРИМЕНЕНИЯ

Знак Х, стоящий после Ех-маркировки, означает, что при эксплуатации изделий необходимо соблюдать следующие специальные условия

при установке в корпусах коробок распределительных типов \$1...\$9/M\$1...M\$9, \$15/M\$15, \$17/M\$17, PL6**, PL7**, E2E**, PJB, корпусах ZPL6**, ZPL7**, ZS1...ZS9, устройствах дренажных/дыхательных должны соблюдаться требования в отношении их ориен в нижней части корпуса коробки. Степень защиты коробки должна соответствовать степени защиты клапана и быть не ниже IP54;

неиспользуемые отверстия для ввода кабелей должны быть закрыты заглушками типов 375 или 387;

все винты коробок распределительных должны быть затянуты в соответствии с требованиями руководства по эксплуатации; если в сертификатах на колодки клеммные не оговорено иное, изоляция подключаемых проводов должна не доходить 1мм до

металлической поверхности клемм:

к каждой клемме должно быть присоединено не более одного одножильного или витого многожильного провода, или нескольких проводников, если они ранее были соединены с помощью соответствующего переходного зажима, обеспечивающего соединение с клеммой посредством одного проводника;

все колодки клеммные и принадлежности, включая перемычки, должны устанавливаться согласно инструкциям производителей;

при подключении не должны быть превышены приведенные на табличке величины напряжения, тока и максимальной мощности рассеивания:

если к клемме подсоединяется проводник, имеющий меньшее поперечное сечение, максимальная величина тока должна быть уменьшена; вводы кабельные типов 501/414, 501/421, 501/421 Size 2K Variant, SB474, 501/423, 501/453/RAC, 501/453/Dedicated, 501/453 Oversized, 501/453, 501/452/RAC, CSB 656, CSB 656N, CSB 656 Oversized, ICG 623, ICG 653/UNIV, ICG 653 Oversized, ICG 611, ICG 659, PSG 553/RAC, SB474, ExnR 553, 753 могут применяться только для стационарного оборудования; прокладку кабеля выполнять в соответствии с требованиями ГОСТ ІЕС 60079-14-2011;

вводы кабельные типов 501/453 Dedicated, 501/453 Oversized, 501/421 Size 2K Variant, 501/421, 501/453 RAC, 501/453, ICG 653/UNIV, ICG 623, CSB 656, ICG 611 не могут использоваться для комплектования взрывонепроницаемых оболочек для подгруппы взрывоопасной смеси ПС объемом более 2000 см3;

если, при номинальных условиях, температура превышает 70 С° в месте заделки кабеля или 80 С° в месте разветвления проводов, в маркировке или инструкциях должна содержаться информация, обращающая внимание на необходимость выбора соответствующего кабеля;

уплотнение соединения ввода кабельного с взрывозащищенным электрооборудованием должно обеспечить степень защиты от внешних воздействий не менее IP 54;

заглушки типов 390, 487, выполненные из алюминия относятся к оборудованию групп II и III;

уплотнение соединения заглушек типов 375, 387, 475/477, М475/М477, адаптеров резьбовых типов 476, 476/1A, 476/1, 478, 470, 483, 484 с корпусом ввода кабельного и с корпусом взрывозащищенного электрооборудования должно обеспечить степень защиты от внешних воздействий не менее IP 54:

- зажимное устройство соединителей типов ControlEx, InstrumEx, PowerEx не должно подвергаться воздействию температуры, превышающей 100 С°:

при использовании соединителей типов ControlEx, InstrumEx, PowerEx в качестве оборудования оборудованию группы III должна быть обеспечена степень защиты не ниже IP66.

Снепнальные условия применения, обозначенные знаком Х, должны быть отражены в сопроводительной документации, одлежащей обязательной поставке в комплекте с каждым изделнем.

ПРИЛОЖЕНИЕ

к сертификату соответствия № тс ^{RU C-DE.BH02.B.00222}

Серия RU № 0267683

2 Описание элементов конструкции и средств обеспечения взрывозащиты

Переключатели герконовые 07-*211-**** имеют неразборную конструкцию и состоят из пластмассовой оболочки, внутри которой размещен герконовый переключатель, залитый компаундом вместе с постоянно присоединенным кабелем.

Выключатели и переключатели состоят из механических подвижных контактов, помещенных во взрывонепроницаемую оболочку. Кабельный ввод загерметизирован компаундом. Управление контактами производится подвижным штоком, установленным в отверстие оболочки.

Модули переключения состоят из механических подвижных контактов, помещенных во взрывонепроницаемую оболочку. Подключение к внешним электрическим цепям выполнено с использованием кабельного ввода или клеммной колодки. Механическое управление контактами выполнено с использованием специальной управляющей насалки.

Выключатели, переключатели и модули переключения с комплектующими и запасными устройствами в части взрывозащиты соответствуют требованиям ТР ТС 012/2011, ГОСТ 30852.0-2002 (МЭК 60079-0:1998), ГОСТ 30852.1-2002 (МЭК 60079-1:1998), ГОСТ 30852.8-2002, ГОСТ 30852.17-2002 (МЭК 60079-18:1992), ГОСТ IEC 61241-0-2011, ГОСТ ЕС 61241-11-2011, ГОСТ IEC 61241-18-2011.

Маркировка взрывозащиты, наносимая на оборудование и указанная в технической документации изготовителя, должна содержать специальный знак взрывобезопасности в соответствии с Приложением 2 ТР ТС 012/2011 «О безопасности оборудования для работы во взрывоопасных средах».

Взрывозащита выключателей, переключателей и модулей переключения обеспечивается следующими средствами. Электрические цепи, содержащие искрящие элементы (кнопки), выполнены искробезопасными.

Подвижные контакты заключены во взрывонепроницаемую оболочку, выдерживающую давление взрыва и исключающую передачу горения в окружающую взрывоопасную среду.

Взрывоустойчивость и взрывонепроницаемость оболочек выключателей и модулей переключения соответствуют требованиям ГОСТ 30852.1-2002 (МЭК 60079-1:1998) для электрооборудования подгруппы IIC.

Параметры взрывонепроницаемых соединений оболочек соответствуют требованиям ГОСТ 30852.1-2002 (МЭК 60079-1:1998) для электрооборудования подгруппы IIC.

Параметры заливки электрических соединений и кабельного ввода переключателей герконовых 07-*211-**** выполнена в соответствии требованиями ГОСТ 30852.17-2002 (МЭК 60079-18:1992). Компаунд сохраняет свои свойства во всем диапазоне рабочих температур.

Пути утечки и электрические зазоры соединительной колодки модулей переключения соответствуют требованиям ГОСТ 30852.8-2002.

Взрывозащита от воспламенения пыли обеспечивается степенью защиты оболочки от воздействия внешней среды IP65 по ГОСТ IEC 61241-1-1-2011 и заливкой компачидом по ГОСТ IEC 61241-18-2011.

Механическая прочность оболочек выключателей и модулей переключения соответствует требованиям для электрооборудования II группы с высокой опасностью механических повреждений по ГОСТ 30852.0-2002 (МЭК 60079-0:1998).

Применяемые материалы соответствуют требованиям по обеспечению фрикционной и электростатической искробезопасности по ГОСТ 30852.0-2002 (МЭК 60079-0:1998).

Максимальная температура нагрева выключателей и модулей переключения не превышает значений, соответствующих температурному классу Т5 или Т6 по ГОСТ 30852.0-2002 (МЭК 60079-0:1998).

На корпусах выключателей, переключателей и модулей переключения имеются маркировка взрывозащиты и знак «Х» или «U».

3 Условия применения

Выключатели, переключатели и модули переключения относятся к взрывозащищенному электрооборудованию группы II по ГОСТ 30852.0-2002 (МЭК 60079-0:1998) и предназначены для применения во взрывоопасных зонах в соответствии с установленной маркировкой взрывозащиты, требованиями ТР TC 012/2011, ГОСТ 30852.13-2002 (МЭК 60079-14:1996), других нормативных документов, регламентирующих применение электрооборудования во взрывоопасных зонах, и руководств по эксплуатации, привеленных в таблице 3.

Возможные взрывоопасные зоны применения, категории и группы взрывоопасных смесей газов и паров с воздухом – в соответствии с требованиями ГОСТ 30852.9-2002 (МЭК 60079-10:1995), ГОСТ 30852.5-2002 (МЭК 60079-4:1975), ГОСТ IEC 61241-10-2011.

Переключатели герконовые 07-*211-**** модификаций 07-2211-1*10, 07-2211-2*20, выключатели прецизионные концевые 07-295*-**30/****, 07-296*-**6*/****, модуль переключения ComEx Flex07-3323-5***/**** относятся к электрооборудованию, предназначенному для применения в зонах, опасных по воспламенению горючей пыли, в соответствии с присвоенной маркировкой взрывозащиты.

Знак «U», стоящий после маркировки взрывозащиты выключателей, переключателей встраиваемых и модулей переключения, означает, что они относятся к Ех-компонентам групп I и II по ГОСТ 30852.0-2002 (МЭК 60079-0:1998) и предназначены для установки внутри оболочки, обеспечивающей необходимый вид взрывозащиты.

Знак «Х», стоящий после маркировки взрывозащиты, означает, что выключатели, переключатели и модули переключения выпускаются с постоянно присоединенным кабелем. Подключение свободного конца кабеля во взрывоопасной зоне должно обеспечивать необходимый уровень взрывозащиты и выполняться в соответствии с указаниями руководства по эксплуатации.

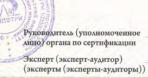

Установка и эксплуатация выключателей, переключателей встраиваемых и модулей должны проводиться в строгом соответствии с руководствами по эксплуатации, приведенными в таблице 3.

Условия применения:

M.II.

	пература окружающей среды, °С	в соответствии с таблицей 1
 атмо 	осферное давление, кПа	от 66 до 106,7
- OTHO	осительная влажность при 35 °C, %	не более 98

Внесение в конструкцию выключателей, переключателей встраиваемых и модулей переключения изменений, касающихся средств взрывозащиты, должно быть согласовано с ОС ВСИ «ВНИИФТРИ».

follectores.

(b) EC-TYPE EXAMINATION CERTIFICATE

- (2) Equipment and protective systems intended for use in potentially explosive atmospheres - Directive 94/9/EC
- (3) EC-Type Examination Certificate Number: KEMA 01ATEX2124 X Issue Number: 3
- (4) Equipment: Self-limiting heating element Cameo-S, Models CT-*A, LP-*A, LP-*S, CS-*S, SP-*A, LP-0AHP and LP-0SHP and Smart Heater, Models SM-*A, SM-0AHP, SMLP-*A and SMLP-0AHP
- (5) Manufacturer: Condor Technology Ltd.
- (6) Address: Havenstraat 66, 1271 AG Huizen, The Netherlands
- (7) This equipment and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.
- (8) KEMA Quality B.V., notified body number 0344 in accordance with Article 9 of the Council Directive 94/9/EC of 23 March 1994, certifies that this equipment has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres given in Annex II to the directive.

The examination and test results are recorded in confidential test report number 212100300.

(9) Compliance with the Essential Health and Safety Requirements has been assured by compliance with:

EN 60079-0 : 2006	EN 60079-1 : 2004
EN 61241-0 : 2006	EN 61241-1 : 2004

- (10) If the sign "X" is placed after the certificate number, it indicates that the equipment is subject to special conditions for safe use specified in the schedule to this certificate.
- (11) This EC-Type Examination Certificate relates only to the design, examination and tests of the specified equipment according to the Directive 94/9/EC. Further requirements of the directive apply to the manufacturing process and supply of this equipment. These are not covered by this certificate.
- (12) The marking of the equipment shall include the following:

II 2 G Ex d IIC T4 or T3 II 2 D Ex tD A21 IP6x T 135 °C or T 200 °C

This certificate is issued on January 15, 2009 and, as far as applicable, shall be revised before the date of cessation of presumption of conformity of (one of) the standards mentioned above as communicated in the Official Journal of the European Union.

Integral publication of this certificate and adjoining reports is allowed. This Certificate may only be reproduced in its entirety and without any change.

KEMA Quality B.V. Utrechtseweg 310, 6812 AR Arnhem P.O. Box 5185, 6802 ED Arnhem The Netherlands T +31 26 3 56 20 00 F +31 26 3 52 58 00 customer@kema.com www.kema.com Registered Arnhem 09085396

(13) SCHEDULE

- (14) to EC-Type Examination Certificate KEMA 01ATEX2124 X Issue No. 3
- (15) Description

Self-limiting heating element Cameo-S, models CT-*A, LP-*A, LP-*S, CS-*S, SP-*A, LP-0AHP and LP-0SHP and Smart Heater, models SM-*A, SM-0AHP, SMLP-*A and SMLP-0AHP for fixed installation, made of aluminium or stainless steel, provided with PTC-heating elements.

The relation between the Model and the Temperature class/ code is given in the following table:

Model	Temperature class/ code
xx-0x / xx-1x	T3 / T200 °C
xx-2x / xx-3x / xx-4x	T4 / T135 °C

Electrical data

Rated voltage	12-36 V or 110-240 V
Power	Max. 500 W

Routine tests

Routine tests according to Clause 16 of EN 60079-1 are not required since the free internal volume is less than 10 cm³.

(16) Test Report

KEMA No. 212100300

(17) Special conditions for safe use

Ambient temperature range -60 °C to +90 °C.

(18) Essential Health and Safety Requirements

Assured by compliance with the standards listed at (9).

(19) Test documentation

As listed in Test Report No. 212100300.

3. ОПИСАНИЕ КОНСТРУКЦИИ И ОБЕСПЕЧЕНИЯ ВЗРЫВОЗАЩИЩЕННОСТИ 3.1 Описание конструкции.

Harpesatenshise устройства CT-*A, CS-*S, LP-*A, LP-*S, SP-*A, SP-0AHP, LP-0AHP, LP-0SHP, Smart Heaters Mozenen SM- *A. SM-ОАНР, SMLP-*А, SMLP-ОАНР имеют монолитный прямоугольный металлический корпус из алюминиевого сплава (или из нержавеющей стали 316) с внешними ребрами радиатора, внутри которого размещен саморегулирующийся полупроводниковый нагревательный элемент. На торце корпуса установлен кабельный ввод для постоянно подсоединенного кабеля.

Термостаты FIX-THERM моделей TH, THS имеют цилиндрический металлический корпус из алюминиевого сплава (или из нержавеющей стали 316), внутри которого размещены контакты терморегулятора. На торце корпуса установлен кабельный ввод для постоянно подсоединенного кабеля

Термостаты FIX-Therm моделей ТН-IL имеют цилиндрический металлический корпус из алюминиевого сплава, заполненный компаундом, внутри которого размещены контакты терморегулятора. На торце корпуса установлен кабельный ввод для постоянно подсоединенного кабеля.

3.2 Обеспечение взрывозащиты.

Взрывозащищенность нагревательных устройств и термостатов FIX-THERM моделей TH, THS обеспечивается защитой вида взрывонепроницаемые оболочки d" по ГОСТ IEC 60079-1-2011, «пыленепроницаемым исполнением с видом взрывозащиты от воспламенения пыли «b» в соответствии с требованиями ГОСТ Р МЭК 60079-31-2010. и выполнением их конструкции в соответствии с требованиями ГОСТ Р MOK 60079-0:2011

Взрывозащищенность термостатов FIX-Therm моделей TH-IL обеспечивается защитой вида "герметизация компаундом (m) " по ГОСТ Р МЭК 60079-18-2012, «пыленепроницаемым исполнением с видом взрывозащиты от воспламенения пыли «в» в соответствии с требованиями ГОСТ Р МЭК 60079-31-2010, и выполнением их конструкции в соответствии с требованиями ГОСТ Р МЭК 60079-0:2011.

4. МАРКИРОВКА

Маркировка, нанесенная на корпусах нагревательных устройств и термостатов, включает следующие данные:

- знак или наименование предприятия-изготовителя; наименование излелия.
- порядковый номер изделня или год выпуска:
- Ех-маркировку;
- специальный знак взрывобезопасности;
- предупредительные налписи

М.П.

- температуру окружающей среды при эксплуатации,
- наименование органа по сертификации и номер сертификата,

и другие данные, которые изготовитель должен отразить в маркировке в соответствии с требованиями нормативной и технической документации

Виссение изменений в согласованные чертежи и конструкцию изделий возможно только по согласованию с НАНИО «ЦСВЭ».

LCIE, notified body number 0081 in accordance with article 9 of the directive 94/9/CE of the European Parliament and

Council of 23 March 1994, certifies that this equipment or

protective system has been found to comply with the

Essential Health and Safety Requirements relating to the design and construction of equipment and protective

system intended for use in potentially explosive

atmospheres, given in Annex II to the directive. The examination and test results are recorded in confidential report No 11 320 010.

Compliance with the Essential Health and Safety

If the sign X is placed after the certificate number, it

indicates that the equipment or protective system is subject

to special conditions for safe use specified in the schedule

This EC Type examination certificate relates only to the design and construction of this specified equipment or

protective system in accordance with the Directive 94/9/EC

Further requirements of Directive applies to the

manufacture and supply of this equipment or protective

The marking of the equipment or protective system shall include the following :

Requirements has been assured by compliance with :

certificate and the documents therein refered to.

- 7 Cet appareil ou système de protection et ses variantes éventuelles acceptées est décrit dans l'annexe de la présente attestation et dans les documents descriptifs cités en annexe.
- Le LCIE, organisme notifié sous la référence 0081 conformément à l'article 9 de la directive 94/9/CE du 8 Parlement européen et du Conseil du 23 mars 1994, certifie que cet appareil ou système de protection est conforme aux exigences essentielles en ce qui concerne la sécurité et la santé pour la conception et la construction d'appareils et de systèmes de protection destinés à être utilisés en atmosphères explosibles, données dans l'annexe II de la directive. Les vérifications et épreuves figurent dans notre rapport confidentiel N° 11 320 010.
- 9 Le respect des exigences essentielles en ce qui concerne la sécurité et la santé est assuré par la conformité aux documents suivants :

- EN 50014 (1992) - EN 50018 (1994)

- 10 Le signe X lorsqu'il est placé à la suite du numéro de l'attestation, indique que ce matériel ou système de protection est soumis aux conditions spéciales pour une utilisation sûre, mentionnées dans l'annexe de la présente attestation
- 11 Cette attestation d'examen CE de type concerne uniquement la conception et la construction de l'appareil ou du système de protection spécifié, conformément à la directive 94/9/CE. Des exigences supplémentaires de cette directive sont applicables pour la fabrication et la fourniture de l'appareil ou du système de protection.
- Le marquage de l'appareil ou du système de protection devra comporter, entre autres indications utiles, les 12 mentions suivantes :

(A2) ATTESTATION D'EXAMEN CE DE TYPE

LCIE 99 ATEX 6017 X

(A4) Description de l'équipement ou du système de protection

Appareil de forme carrée, d'un volume interne libre de 384 cm³ qui contient un thermostat et une sonde de température.

Le marquage sera le suivant :

- HEATEX LTD NORFOLK ENGLAND
- Type : HFT
- N° de fabrication - Année de fabrication
- E 112G
- EEx d IIC T6
- LCIE 99 ATEX 6017 X
- NE PAS OUVRIR SOUS TENSION

Le marquage CE est accompagné du numéro d'identification de l'organisme notifié responsable de la surveillance du système de qualité (0081 pour le LCIE).

(A4) Documents descriptifs

Dossier technique N° 2004.15.01 Rév. 1 du 24.03.1999. Ce document comprend 6 rubriques (7 pages).

(A5) Conditions spéciales pour une utilisation sûre

Le transfert calorifique de l'élément de mesure ne devra en aucun cas transmettre un échauffement de plus de 80 °C, température ambiante incluse, à toute partie du thermostat susceptible d'être directement en contact avec une atmosphère explosible.

(A6) Exigences essentielles en ce qui concerne la sécurité et la santé

La conception de cet équipement satisfait aux normes européennes EN 50014 et EN 50018 (seconde édition).

Épreuve individuelle

Le matériel est dispensé d'épreuve individuelle.

(A1) SCHEDULE

EC TYPE EXAMINATION CERTIFICATE (42)

LCIE 99 ATEX 6017 X

(A4) Description of Equipment or Protective System

Apparatus square form, 384 cm³ internal free volume who contain a thermostat and temperature probe.

The marking will be the following :

- HEATEX LTD NORFOLK ENGLAND - Type : HFT - Serial number - Year of construction Ex 112G - EEx d IIC T6 - LCIE 99 ATEX 6017 X - DO NOT OPEN WHILE ENERGIZED

The CE marking shall be accompanied by the identification number of the notified body responsible for surveillance of the quality system (0081 for the LCIE).

(A4) Descriptive documents :

Technical file N° 2004.15.01 Rev 1 dated 24.03.1999. This file includes 6 items (7 pages).

(A5) Special conditions for safe use

The calorific transfer of sensor shall not transmit, in any case a heating above 80 °C, including ambiant temperature, to all thermostat part directly in contact with explosive atmosphere.

(A6) Essential Health and Safety Requirements

The design of the equipment complies to European Standards EN 50014 and EN 50018 (second edition).

Routine test

The equipment is exempt from individual test.

(A1) ATTESTATION D'EXAMEN CE DE TYPE LCIE 99 ATEX 6017X du 22 septembre 1999

MANUFACTURERS DECLARATION OF CONFORMITY

Expo Technologies Document Number EXPO 20MDOC1403X

This declaration is issued for the electrical apparatus:

ESE-0P30-003	RTD Sensor (Pipe Plug)
ESE-0P30-004	RTD Sensor (Probe)

Manufacturer

Expo Technologies Ltd Unit 2 The Summit, Hanworth Road Sunbury-on-Thames, Surrey TW16 5DB, UK

This electrical apparatus and any acceptable variation thereto is specified in the Annex to this declaration and the documents therein referred to.

This declaration and schedule confirms compliance of each unit with the following standards:

 IEC 60079-0:2017
 General requirements

 IEC 60079-11:2011
 Equipment protection by intrinsic safety "i"

in respect of being 'simple apparatus' for the purposes of interfacing with external electrical circuits protected by intrinsically safe interfaces and assessed / installed as intrinsically safe circuits (by others).

This apparatus fulfils all the requirements for 'simple apparatus' under IEC 60079-11:2011 Section 5.7

The design is documented in Expo Technologies Confidential Assessment file number SC050

The apparatus marking (simple apparatus is exempt from IEC 60079-11 marking requirements):

Ci = 0 µF Li = 0 mH Tested for 500V ac rms isolation

Annex to Declaration of Conformity EXPO 20MD0C1403X

Description

Expo Technologies purge & pressurization systems may incorporate temperature sensors based on platinum resistance elements type PT 100, which interface between the Expo pneumatic logic environment and the users' monitoring & control system. These sensors are passive devices.

In the Expo application, these sensors are expected to be connected to intrinsically-safe circuits. To that end, the sensors have been assessed by Expo Technologies as meeting the requirements of 'simple apparatus' as defined under IEC 60079-11:2011 Section 5.7.

Special conditions of safe use

The component may only be connected to a circuit made intrinsically-safe via an approved intrinsically-safe interface (by others). Assessment of any such intrinsically-safe circuit is outside the scope of this declaration.

Verifications and tests

The component (or representative sample per batch) has been shown to comply with the circuit insulation requirements of Section 6.3.13 IEC 60079-11:2011.

Expo Test Procedure TP-518-088-WD applies.

Installation Instructions

The installation shall comply with the requirements of IEC 60079-14:2013, in particular Section 16: Additional requirements for types of protection "i" – intrinsic safety.

Temperature sensors are generally afforded a T4 rating when installed as part of an intrinsically safe circuit.

The component may be considered to add 0 μF (capacitance) and 0 mH (inductance) to such a circuit.

EU-Declaration of Conformity

With European Directives

This is to declare that the MiniPurge Purge Controller is manufactured in conformity with the following European Directives and standards:

Electromagnetic Compatibility Directive 2014/30/EU

MiniPurge Systems with a /PO suffix in the type number are non-electrical and are outside the scope of the EMC Directive.

MiniPurge Systems with suffices /PA or /IS incorporate one or more volt-free ("dry") contacts which work in circuits specified by others. In normal operation these circuits are "benign" and no CE mark is appropriate.

MiniPurge Systems with Electronic Timer (Option /ET and /ES) are designed to conform to the EMC Directive, in compliance with EN 61000-6-4:2007 and EN 61000-6-2:2005 (Intertek Report EM10048000) and 61000-6-4:2007 + A1:2011 and EN 61000-6-2:2005 (Intertek Report 102569070LHD-001) respectively.

Low Voltage Directive 2014/35/EU

MiniPurge Systems are intended for use in potentially explosive atmospheres (Hazardous Areas) and are therefore excluded from the Low Voltage Directive.

Pressure Equipment Directive 2014/68/EU

MiniPurge Systems are classified as not higher than category I under Article 13 of this Directive and intended for use in potentially explosive atmospheres (Hazardous Areas) and are therefore excluded from the Pressure Equipment Directive. MiniPurge Systems are covered under ATEX Directive 2014/34/EU.

ATEX Directive 2014/34/EU Equipment for explosive atmospheres MiniPurge Systems are designed to conform to the ATEX Directive in fulfilment of the essential health and safety requirements set out in Annex II, and in compliance with: EN 60079-0: 2012 + A11:2013 EN 60079-2: 2014

MiniPurge Systems are certified by CSA Group Netherlands B.V., Utrechtseweg 310, 6812 AR, Arnhem, Netherlands, under EC Type-Examination Certificate SIRA 01ATEX1295X, in compliance with: EN 60079-0: 2012 + A11:2013 EN 60079-2: 2014

According to the model, MiniPurge Systems are rated and shall be marked as follows:

MiniPurge, Type X & Type Y models	Group II Category 2G & 2D	🔄 II 2(2) GD
Or MiniPurge, Type X	Group II Category 2G	🖾 II 2(2) G
MiniPurge, Type Z models	Group II Category 3G & 3D	🖾 II 2(3) GD

MiniPurge systems are manufactured under Production Quality Assurance Notification SIRA 99 ATEX M043, issued by CSA Group Netherlands B.V. (CSA), Notified Body No 2813.

Signed for and on behalf of Expo Technologies Ltd.,

John Paul de Beer Managing Director
